Alfiafyvet – Odoo 20

Phase 3 delivery: DES00135 **alfiafy_pos**, DES00136 **alfiafy_sale** and the **pos_multi_uom_price** upgrade

Build and test report · 3 November 2026 · AGM Global Services
Repository folder: `testalfiafyvet/` · Test database: `alfiafy20_test`

2 + 1
new modules (DES00135, DES00136) + pos_multi_uom_price upgraded

39 / 39
automated tests passed (17 new in this phase)

25 / 25
checks on the POS screen (Branch 1 register)

8 / 8
checks on the Sales screens (+ approve & confirm)

Module dependency

Dashed boxes are modules delivered earlier (product base, approvals) or the existing multi-UoM POS module, upgraded to Odoo 20 in this phase. The two new modules do not depend on each other; when both are installed, the POS also respects the customer's "Block on Overdue Invoices" switch from alfiafy_sale.

What was done

- Upgraded `pos_multi_uom_price` from 19.0 to 20.0 and changed its pricing as requested: **every unit of measure has its own price** (one unit 55.00, Pack of 6 300.00, Box of 10 500.00). Prices are never divided or multiplied from the unit price, and a unit without a price is not offered at the counter. Single pieces of a pack can be returned at the price paid per piece; a register setting can block this.
- Built `alfiafy_pos` (DES00135): customer phone required, no sale beyond branch stock, wholesale quantity cap, manager PIN above the cashier discount limit, credit hold on Customer Account payments.
- Built `alfiafy_sale` (DES00136): customer price history, out-of-stock confirmation block, credit limit and overdue invoice hold, discount quotations routed to approval.
- Phase 5 set-up in `alfiafy20_test`: two branch registers with cashiers and managers (PINs), test customers, and an Oman company with its sales staff and doctors (no POS).
- Ran the implementation-plan tests in the browser (screenshots in this report) and as automated tests.

1. Modules delivered

Module	Ref.	Status	Version	Purpose
alfiafy_pos Alfiafy Retail Pharmacy Counter Operations	DES00135	New	20.0.1.0.0	Counter controls for the branch POS registers (BRD 1.1 #1–#5, 1.2 #4 at the counter).
alfiafy_sale Alfiafy Wholesale Sales & Commercial Controls	DES00136	New	20.0.1.0.0	Wholesale quotation controls (BRD 1.2 #1–#4).
pos_multi_uom_price	used by DES00135	Upgraded 19 → 20	20.0.1.0.0	Sell a product in several units of measure in the POS, each with its own price.

Implementation plan coverage – DES00135 alfiafy_pos

Plan item	Delivered
Phase 1–2: manifest, `max_pos_qty`, POS settings, `discount_approved_by_id`, POS data loading	Product field “Max POS Quantity per Order”; register settings Cashier discount limit (5 %), Manager PIN, Customer Phone Required, Block Out-of-Stock Sales (all on by default); approving manager stored on the order line.
Phase 3: POS screens	Mandatory phone at payment, out-of-stock block, wholesale cap popup, discount popup with manager PIN (percentage only), credit hold on Customer Account.
Phase 4: views	Product form (Point of Sale tab), POS settings block “Pharmacy Counter Controls”, “Disc. Approved By” on POS order lines.
Phase 5: configuration	pos_multi_uom_price reused and upgraded; one register per branch (2 branches in the test DB); cashiers and managers with PINs.
Phase 6: tests 6.1–6.5	All run on the Branch 1 register (section 4) and as automated tests (section 6).

Implementation plan coverage – DES00136 alfiafy_sale

Plan item	Delivered
Customer: `block_on_overdue`	"Block on Overdue Invoices" on the customer (Invoicing tab), on by default, shared by the company and its contacts.
Order line: `warehouse_free_qty`, `is_out_of_stock`, `last_customer_price(_str)`, `action_view_price_history`	"Free Qty" and "Last Price" columns, history button on each line.
Wizard `sale.order.line.price.history` (+ line)	Popup with the last 5 confirmed sales to this customer and a Higher / Lower / Same tag.
Order: `has_overdue_invoices`, `overdue_invoice_count`, `overdue_amount_total`, `credit_warning_banner`	Red banner on the quotation.
`action_confirm`: hard stops, then discount routing	Stock → credit limit / overdue invoices → discount approval (approvals module).
Views and security	Sale order form, customer form, approval steps list; access rules for the two wizard models.
Phase 5: Oman set-up, posted invoice lock	Oman company with Muscat Warehouse, no POS; 1 sales user and 3 doctors. Posted-invoice lock checked by an automated test.
Phase 6: tests 6.1–6.4	Run in the browser (section 5) and as automated tests (section 6).

2. Test environment and Phase 5 set-up

Item	Value
Odoo	20.0 community + enterprise, Python 3.12 (`.venv20`)
Database	`alfiafy20_test` on `http://localhost:8021` (same database as phases 1–2)
Settings switched on	Units of Measure, Discounts on lines, Customer Credit Limit (Accounting), CRM installed; default pricelist set to QAR
Products	5 vet products available in POS (sales taxes removed: no VAT in Qatar). Ivermectin: max 5 per POS order. Oxytetracycline: unit 55.00, own prices Pack of 6 = 300.00 and Box of 10 = 500.00.

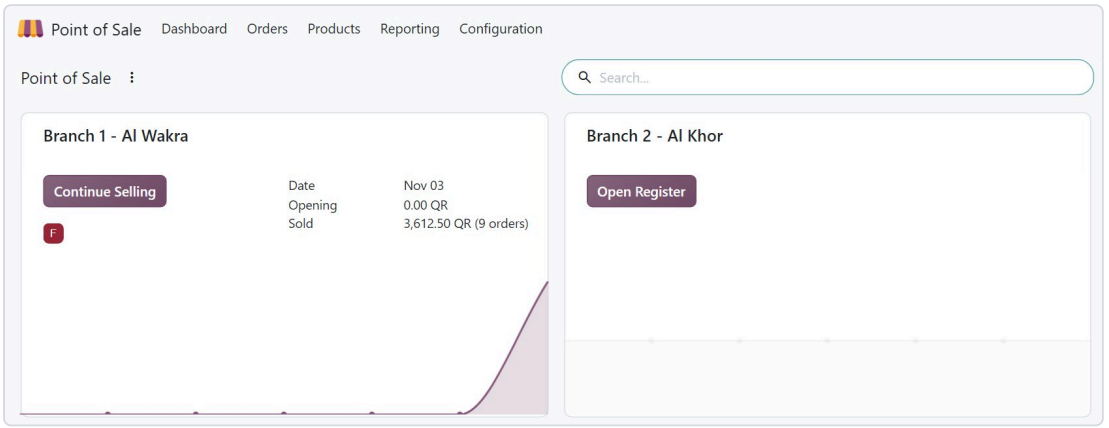

Branch registers and staff

Register	Warehouse / stock	Payment methods	Cashiers (PIN)	Managers (PIN)
Branch 1 - Al Wakra	Pharmacy Branch 1 - Al Wakra (BR1)	Cash BR1, Card, Customer Account	Fatima (1111), Omar (2222)	Dr. Khalid (9999), Dr. Aisha (8888), Administrator
Branch 2 - Al Khor	Pharmacy Branch 2 - Al Khor (BR2)	Cash BR2, Card, Customer Account	Yousef (3333)	Dr. Khalid (9999), Dr. Aisha (8888), Administrator

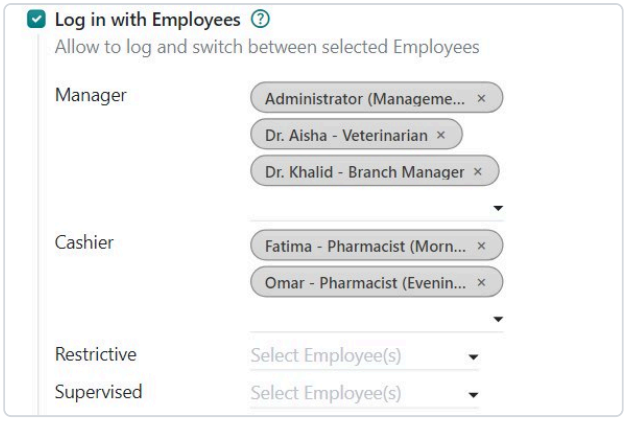

Login to open a register: `pharmacist / Test@1234`, then the employee PIN. The branch names are placeholders and only 2 of the 6 branches were created.

Test customers

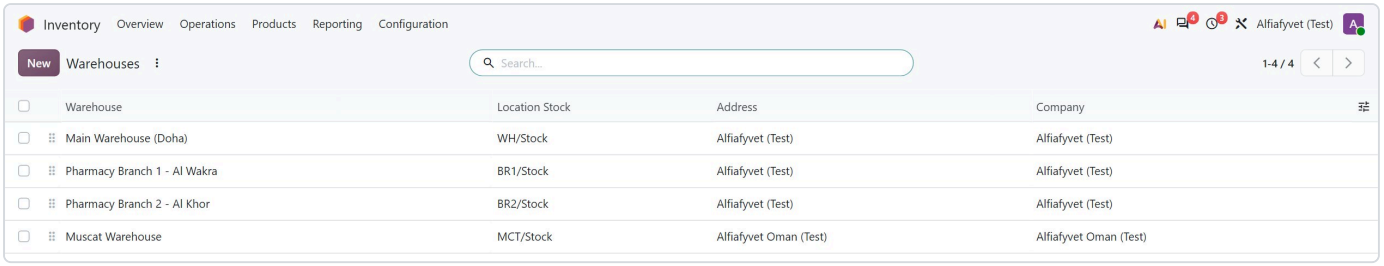

Customer	Situation	Used for
Al Shahaniya Camel Farm	No phone number	POS 6.1 (phone captured at the counter)
Al Khor Equestrian Stables	INV/2026/00001, 1,350.00 QR, due 14/10/2026 (overdue)	POS 6.5, Sales 6.3 (overdue hold)
Doha Equine Clinic	Credit limit 2,000; open invoice 1,800	Credit limit tests
Umm Salal Livestock Co.	Credit limit 5,000; good standing	POS 6.5 credit sale, Sales price history and approval
Mohammed Al-Kuwari	Walk-in retail customer	General POS sales

Point of Sale dashboard: one register per branch.

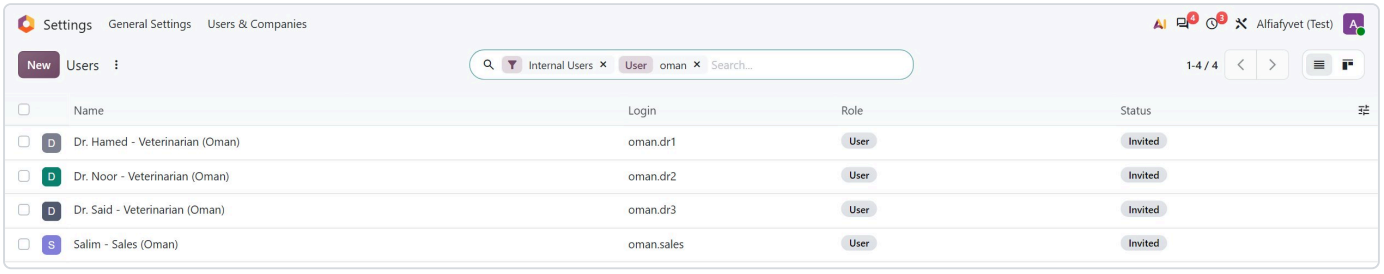

Branch 1 register – Log in with Employees: managers (PIN can approve discounts) and cashiers.

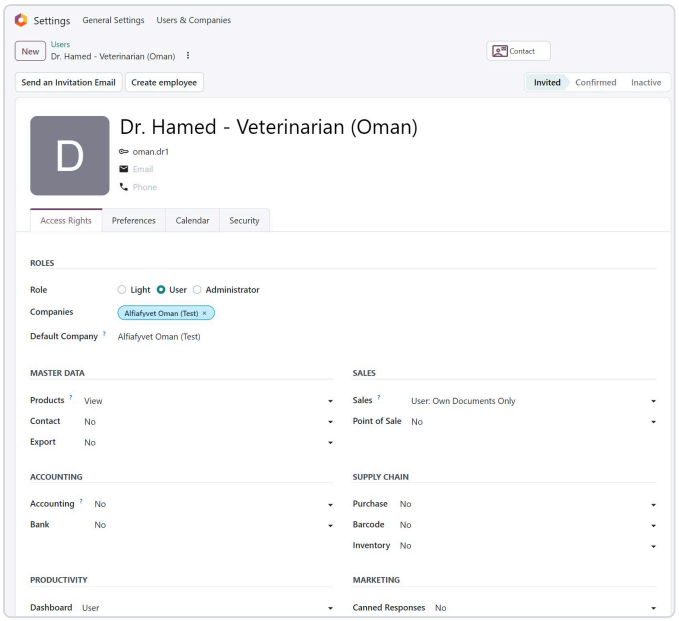

Warehouses (both companies selected): main warehouse, two branch warehouses, and the Muscat warehouse of the Oman company.

Oman branch (no POS)

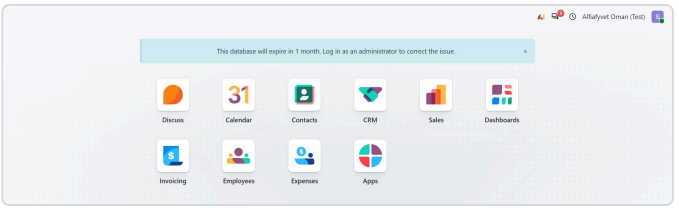

Company "Alfiafyvet Oman (Test)", currency OMR, Muscat Warehouse. Users `oman.sales`, `oman.dr1`, `oman.dr2`, `oman.dr3` (password `Test@1234`) have Sales User (own documents, which also gives CRM access) and Invoicing read-only, and no Point of Sale or Inventory access.

Oman users: one sales user and three doctors, all in the Oman company only.

oman.dr1 access rights: Sales = User: Own Documents Only, Point of Sale = No, Inventory = No. Invoicing read-only is the technical group “Show Accounting Features - Readonly”, which Odoo 20 does not show in the Accounting drop-down.

oman.sales home screen: CRM, Sales and Invoicing; no Point of Sale and no Inventory.

3. pos_multi_uom_price – upgrade and price per unit

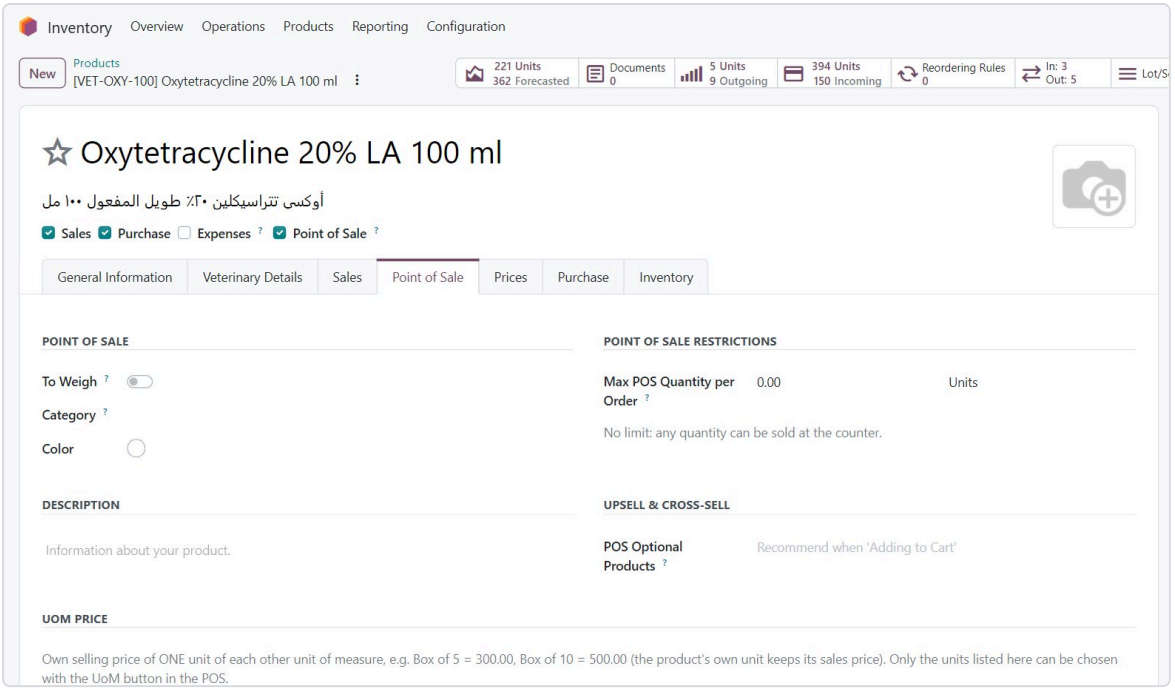

As requested: every unit of measure has its own price. Nothing is calculated from the unit price (no dividing or multiplying by the number of units in the box).

Each unit, its own price
Product form > Point of Sale tab > UOM Price. Example Oxytetracycline: **Unit 55.00** (sales price), **Pack of 6 = 300.00**, **Box of 10 = 500.00**.

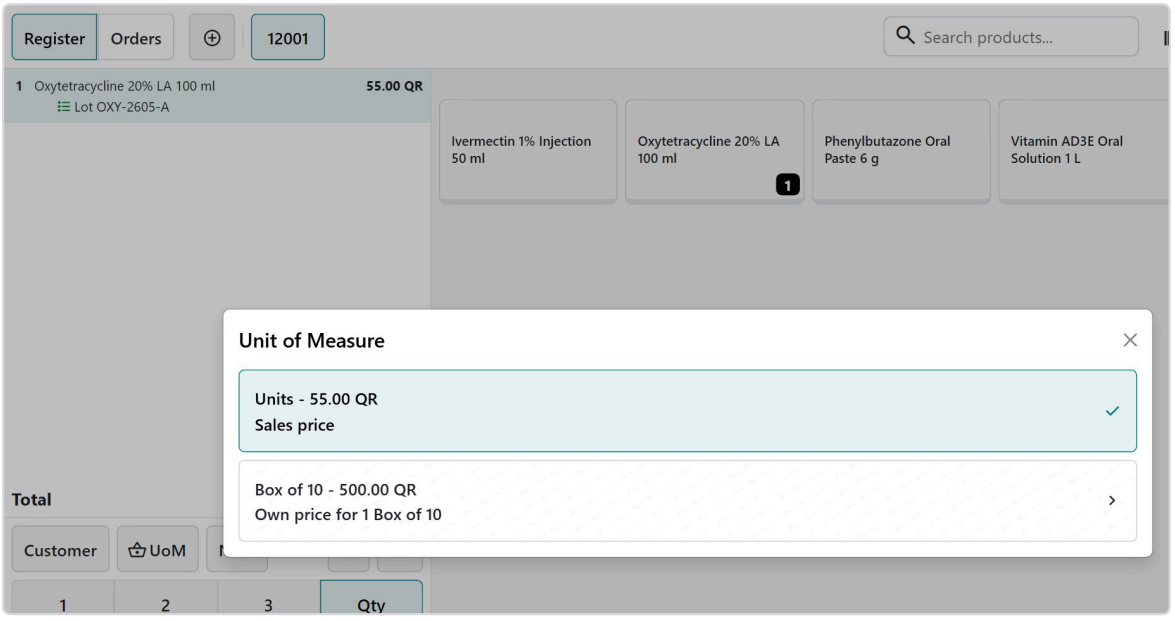

No price = not offered
A unit without a row in the UOM Price table is not listed in the POS, even if it is a packaging of the product. There is no proportional price.

Stock
Always moved in the product's unit: 1 Box of 10 sold = 10 Units out of the branch, from the right lot.

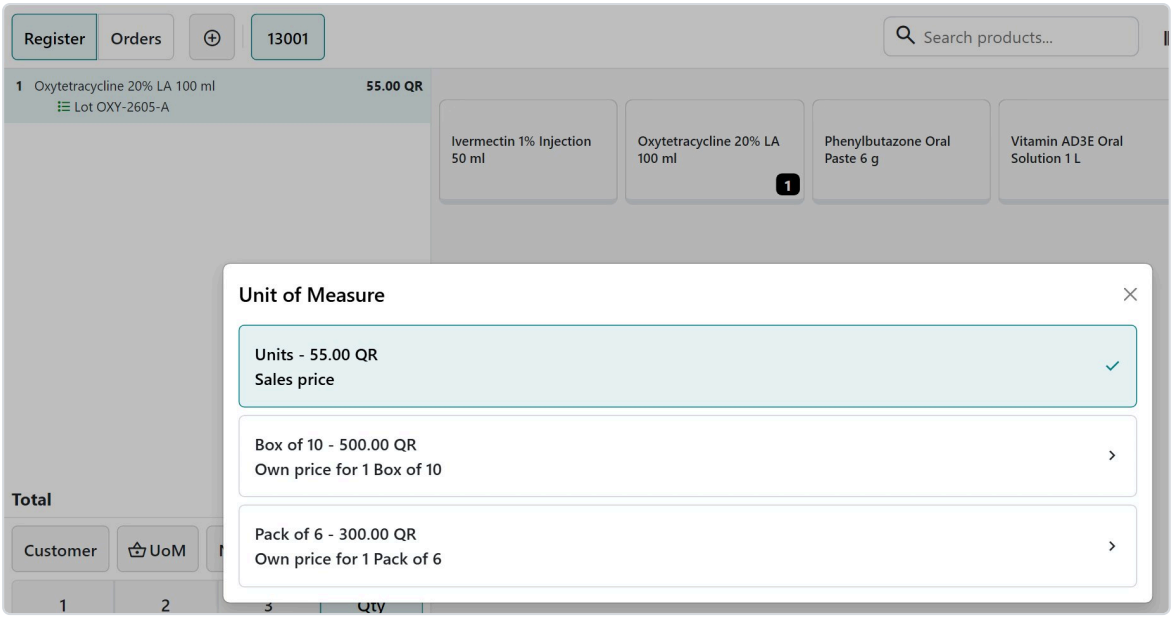

Area	Change in Odoo 20 version
Price table	UOM Price table on the product (and variant). Only units that convert to the product unit (not the product unit itself), no negative price, one price per unit. Template prices are copied to the variants.
Units offered in the POS	The product's own unit (sales price / pricelist) and the units that have a price row. Nothing else.
POS screen	"UoM" button next to Customer: list of the units with their own price ("Own price for 1 Box of 10"). The order line shows "500.00 QR / Box of 10"; the receipt prints the unit sold. A unit price is the same on every pricelist.
Order lines	The unit sold is saved on the POS order line (in Odoo 20 the POS does not send computed fields, so the field was made a normal stored field). Lines in different units are not merged.
Stock and lots	Odoo 20 POS stock code expects quantities in the product unit; the module converts there, so 1 Box of 10 moves 10 Units and lot quantities are correct (the first version left 9 units as a backorder on lot-tracked products: fixed and covered by a test).
Returns	A line sold per pack can be returned in whole packs or in single pieces ("Return Units" on the Orders screen), refunded at the price paid per piece. Setting "Block Fractional Returns" per register (section 3.1).
Cost	Total cost of the line converted into the unit sold; new "Unit cost" column in the POS order lines list.
Technical	`security/ir.access.csv` (Odoo 20 replaces ir.model.access.csv); POS data loaded through `pos.load.mixin`; Owl 3 components; old payment-screen override removed.

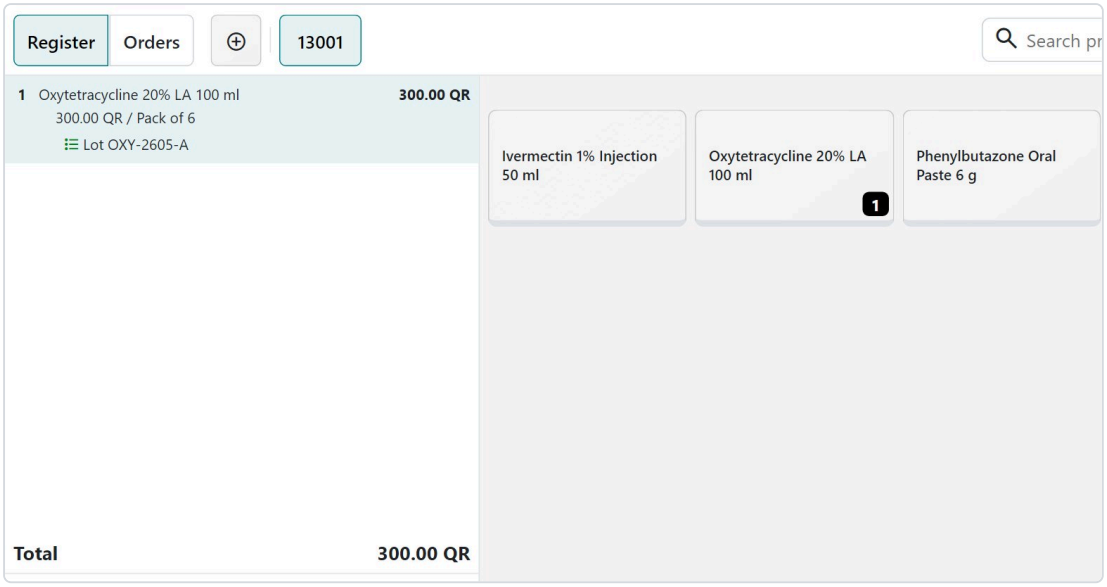

Oxytetracycline – Point of Sale tab: UOM Price table with Box of 10 = 500.00 and Pack of 6 = 300.00. One unit keeps its sales price 55.00.

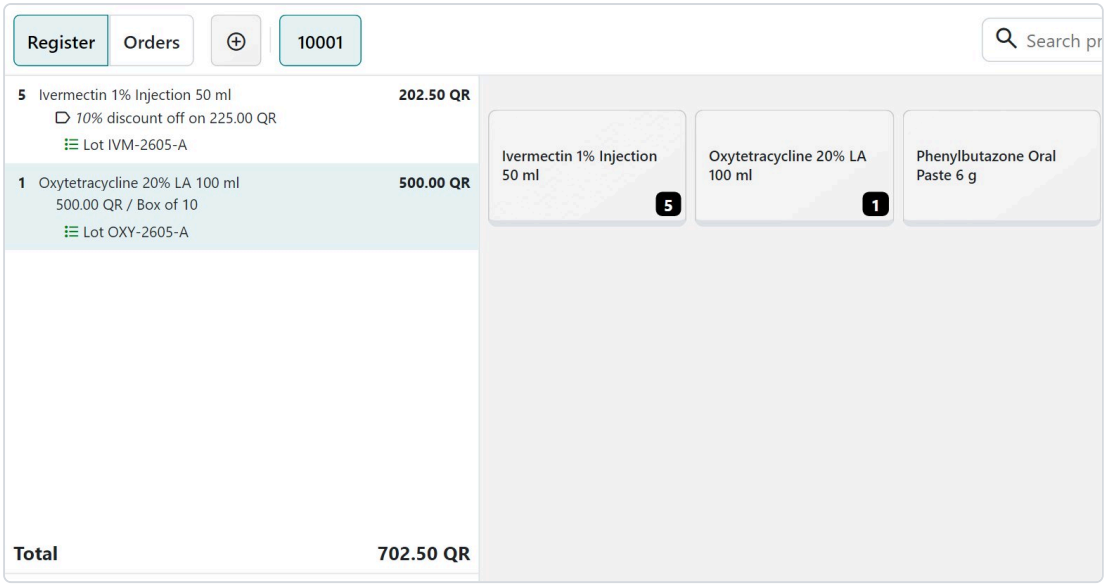

Before Pack of 6 had a price: the UoM list shows only Units 55.00 and Box of 10 500.00. Pack of 6 is a packaging of the product but has no price, so it is not offered.

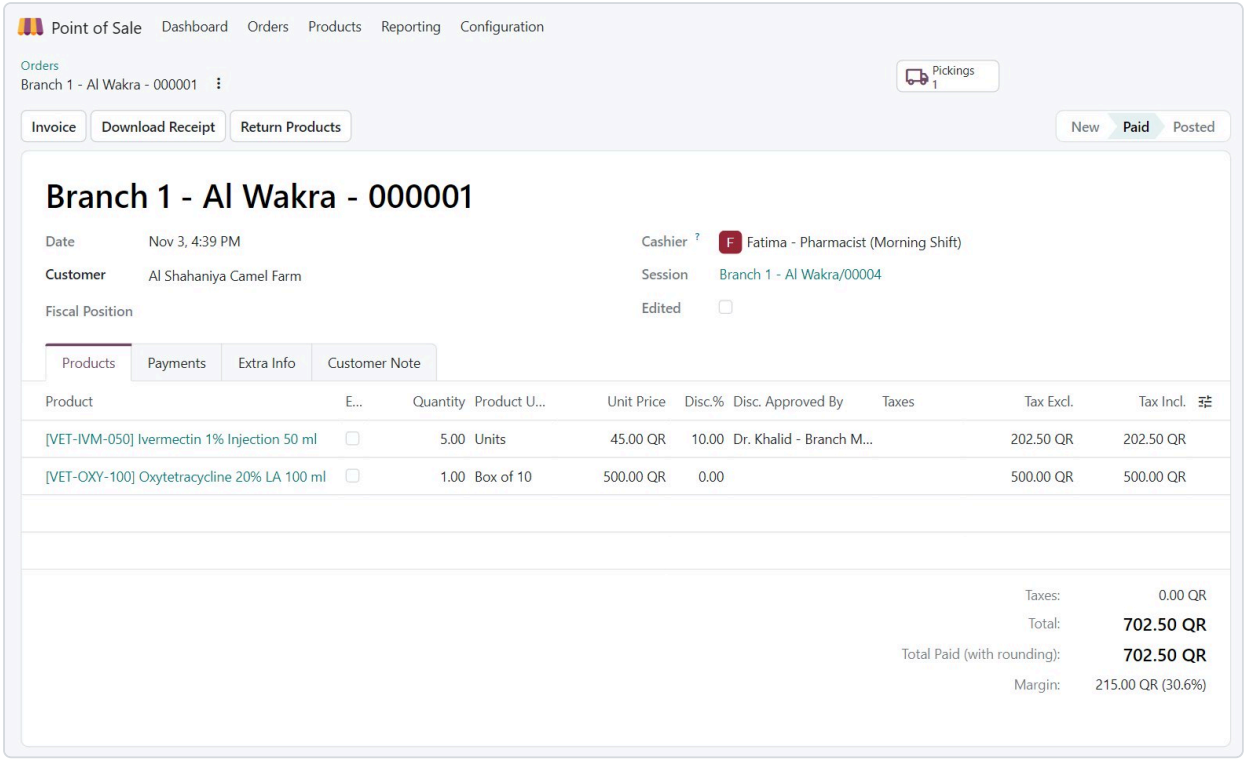

After entering Pack of 6 = 300.00: Units 55.00 (sales price), Box of 10 500.00 and Pack of 6 300.00, each with its own price (not 6 × 55.00 = 330.00).

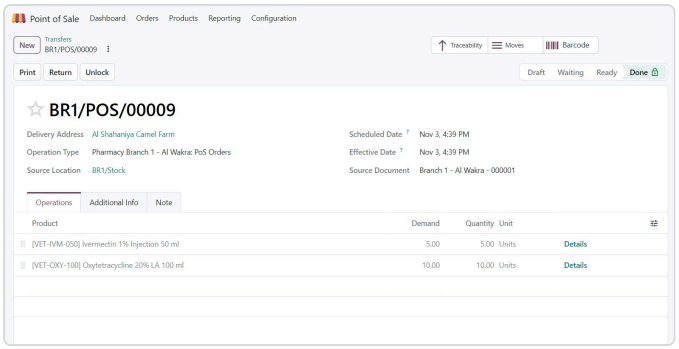

Pack of 6 chosen: line "300.00 QR / Pack of 6", lot OXY-2605-A.

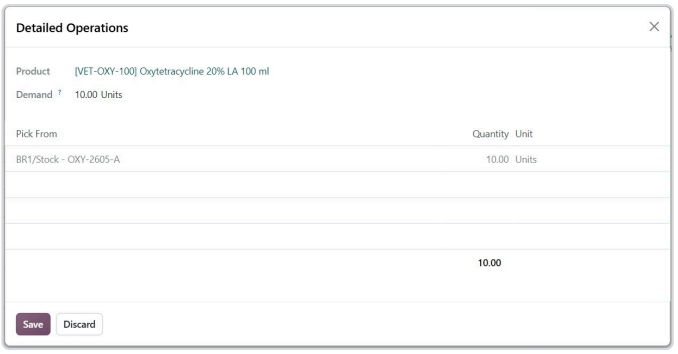

Box of 10 in the order of the POS tests: "500.00 QR / Box of 10", lot OXY-2605-A, order total 702.50 QR.

Synced order in the back office (Point of Sale > Orders): Oxytetracycline 1 Box of 10 at 500.00; Ivermectin 5 Units with 10 % discount approved by Dr. Khalid (section 4.3).

Delivery BR1/POS/00009 from BR1/Stock: Oxytetracycline 10 Units for the 1 Box of 10 sold.

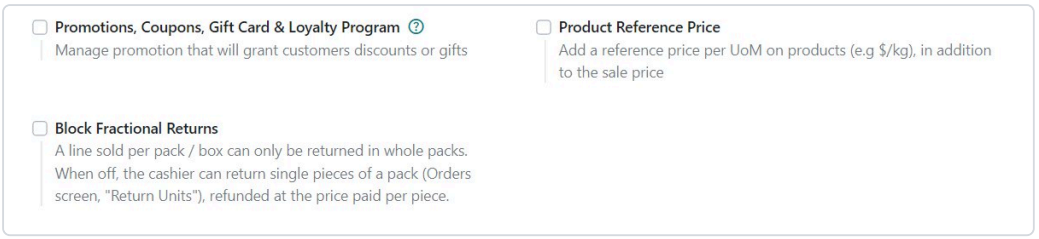

Detailed operations: 10 Units taken from lot OXY-2605-A, no backorder.

3.1 Returns: single pieces of a pack

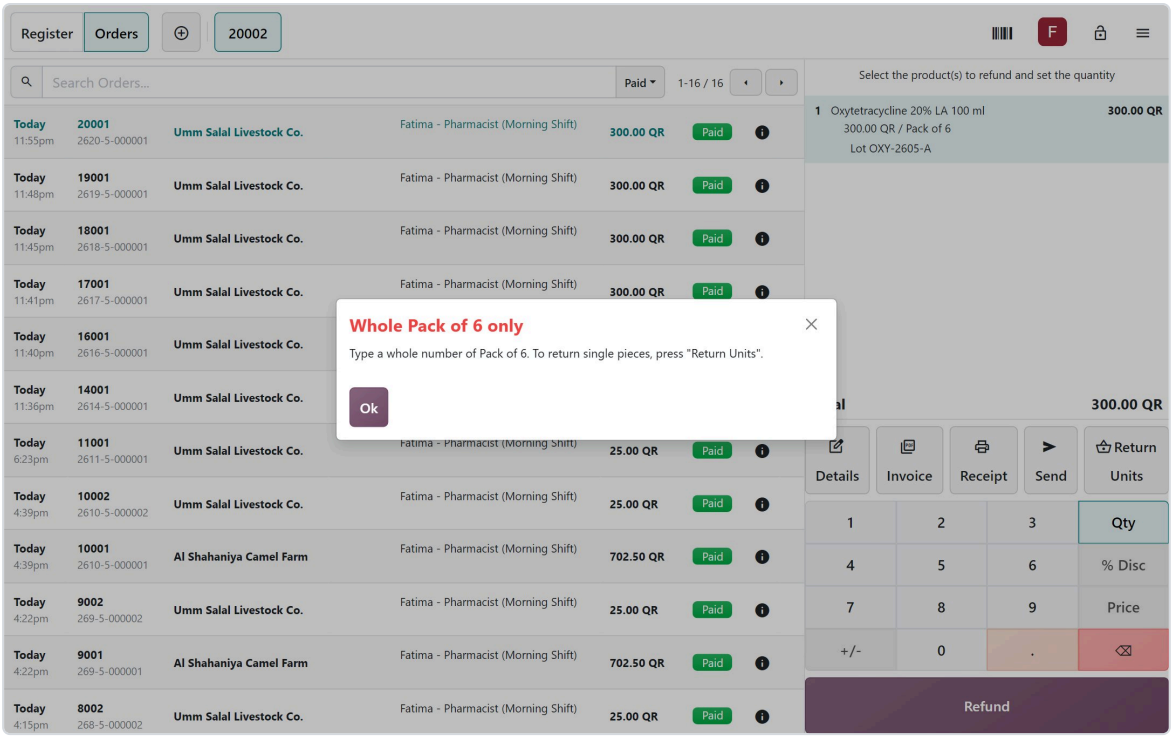

A customer bought a Pack of 6 at 300.00 and brings back 1 piece. The piece is refunded at what the customer paid for it: 300.00 ÷ 6 = **50.00**, and 1 piece goes back into the branch stock.

Step	What the cashier does	What happens
1	Orders → Paid → open the sale → select the Pack of 6 line	The numpad refunds whole packs only (0.5 pack is refused).
2	Press **Return Units** and type the number of pieces (e.g. 1)	The line shows “Return 1 Units at 50.00 QR each”.
3	Press **Refund**, then pay back and validate	Refund order with −1 Units at 50.00 (total −50.00). 1 Unit of lot OXY-2605-A goes back into BR1/Stock.
4	Later, the rest of the pack: select the line again and press 1 (or Return Units, 5)	The 5 pieces left are refunded per piece: −5 Units at 50.00 = −250.00. The pack is then fully refunded.

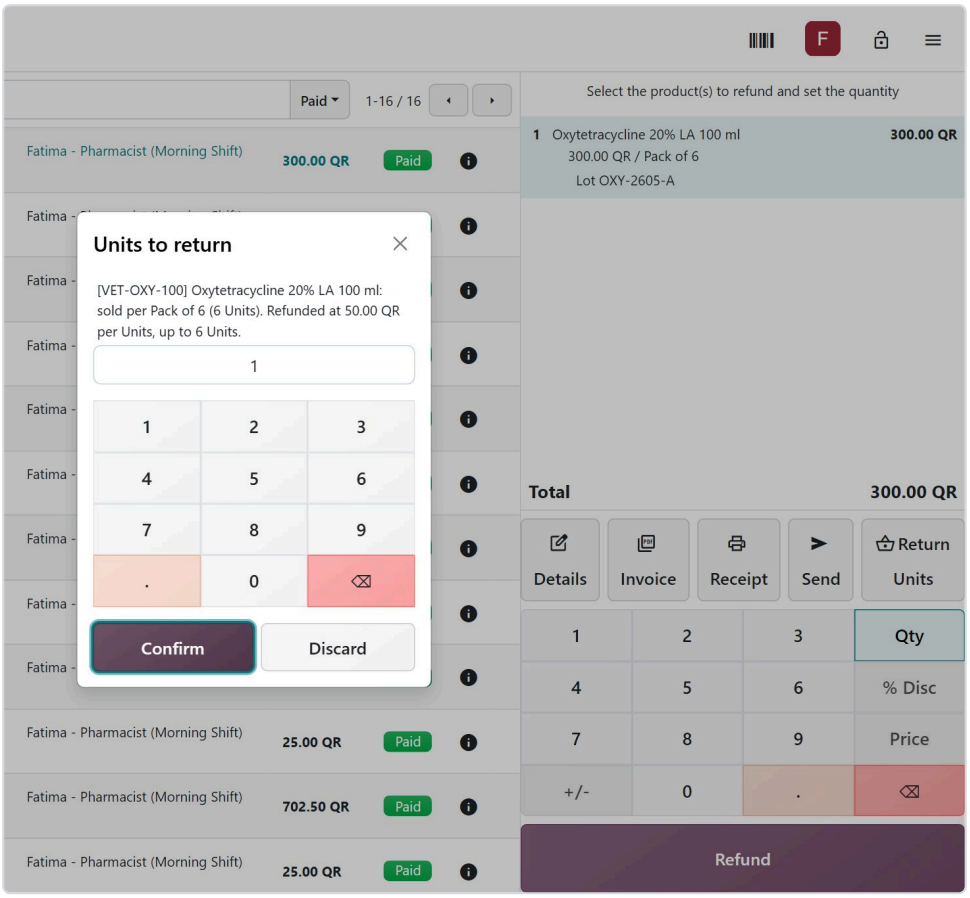

Odoo 20 does not allow quantities to be changed on a refund order, so the number of pieces is chosen on the Orders screen, before pressing Refund. A back-office refund (Point of Sale > Orders > Return) of a partly returned pack is also made per piece.

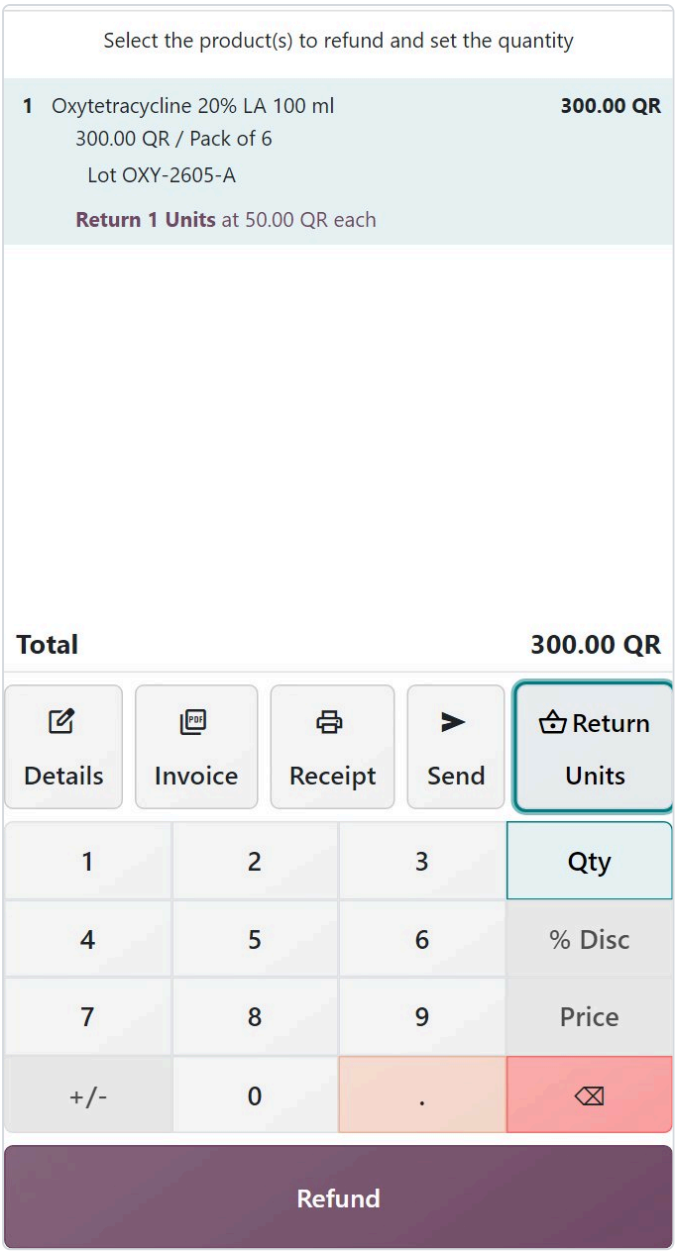

Point of Sale > Configuration > Settings > Block Fractional Returns (per register, off by default): when on, a pack can only be returned as whole packs and the Return Units button is hidden.

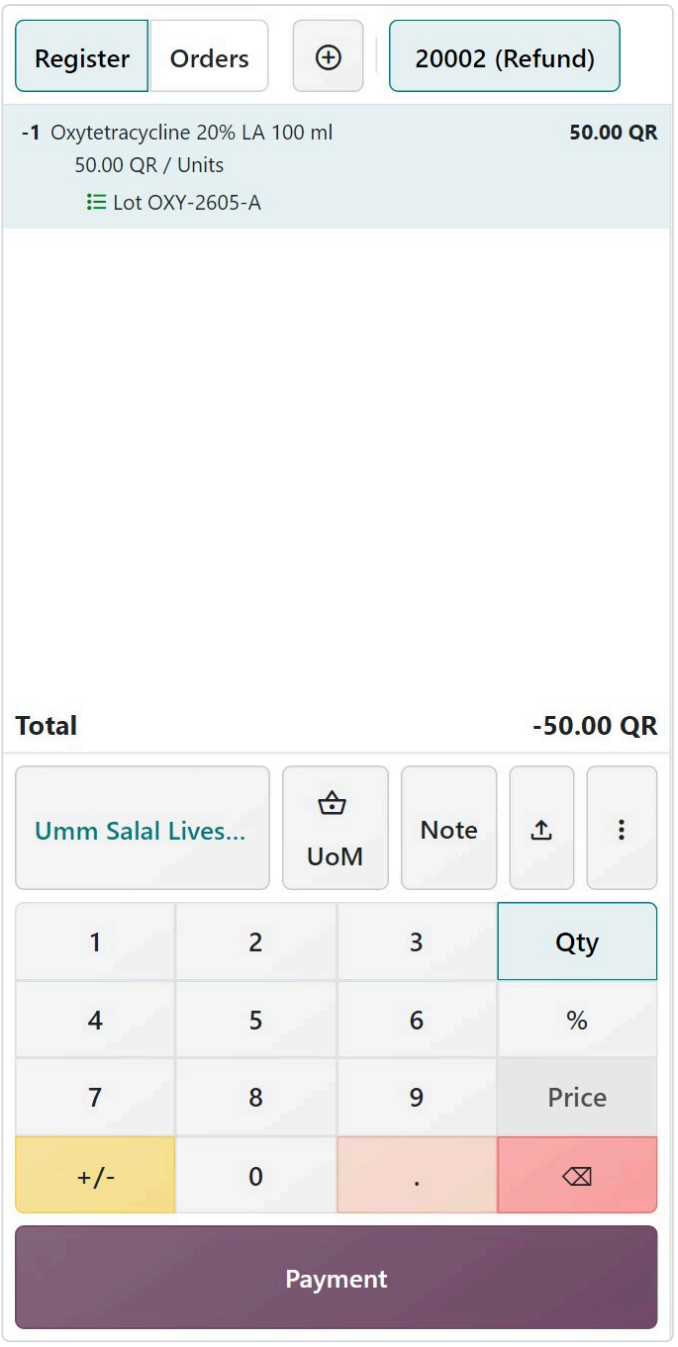

Orders screen, 0.5 typed on the Pack of 6 line: refused, “Type a whole number of Pack of 6. To return single pieces, press Return Units”. The Return Units button is to the right of Details / Invoice / Receipt / Send.

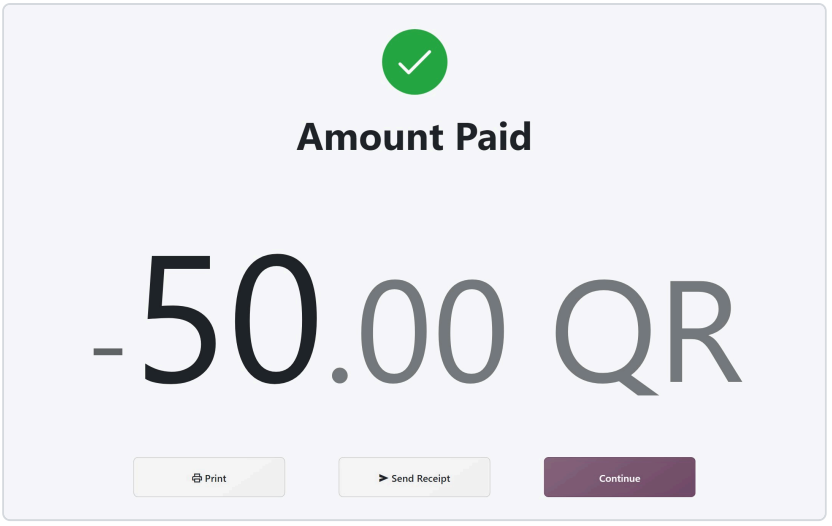

Return Units: the popup shows how the product was sold (Pack of 6 = 6 Units), the price paid per piece (50.00) and how many pieces can still be returned (6).

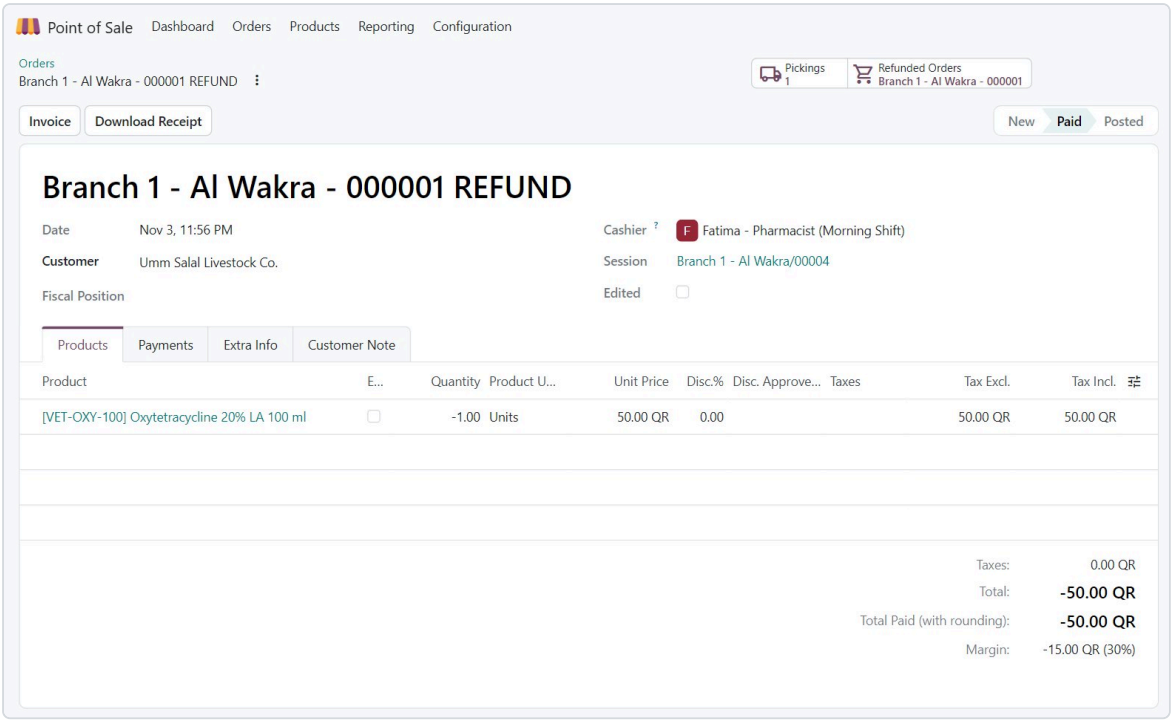

Before Refund: "Return 1 Units at 50.00 QR each" on the sold line.

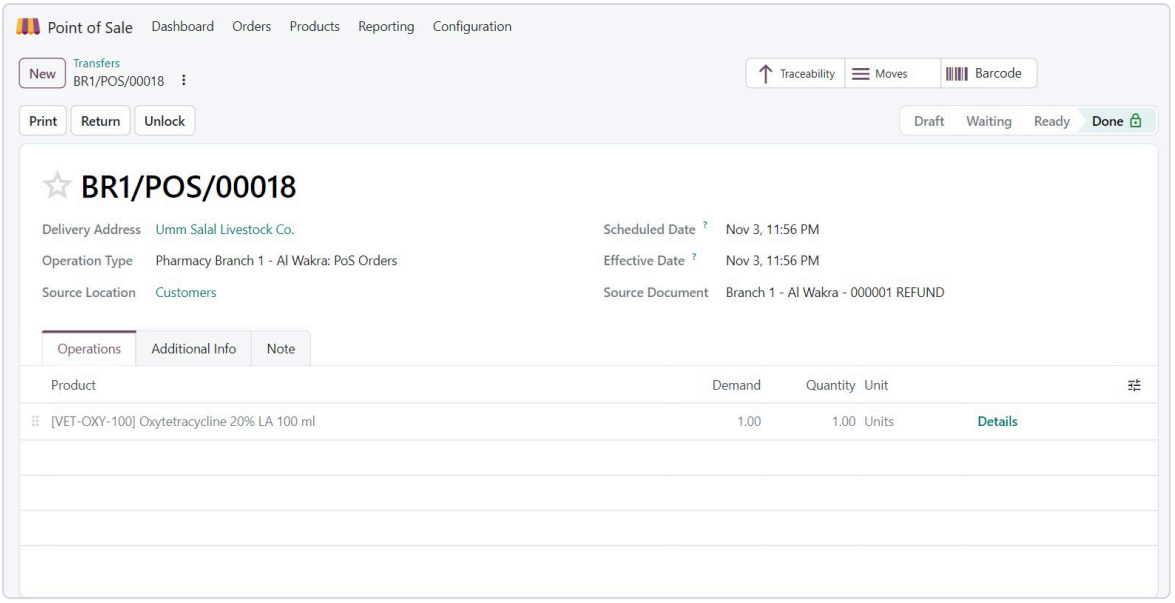

Refund order: −1 Oxytetracycline, 50.00 QR / Units, lot OXY-2605-A, total −50.00 QR.

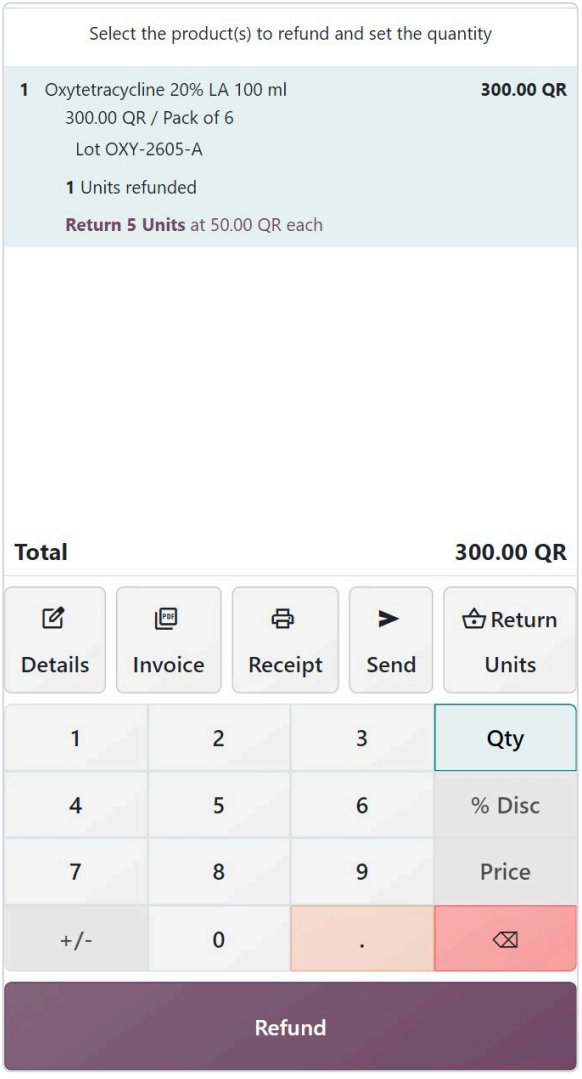

Refund validated: −50.00 QR paid back in cash.

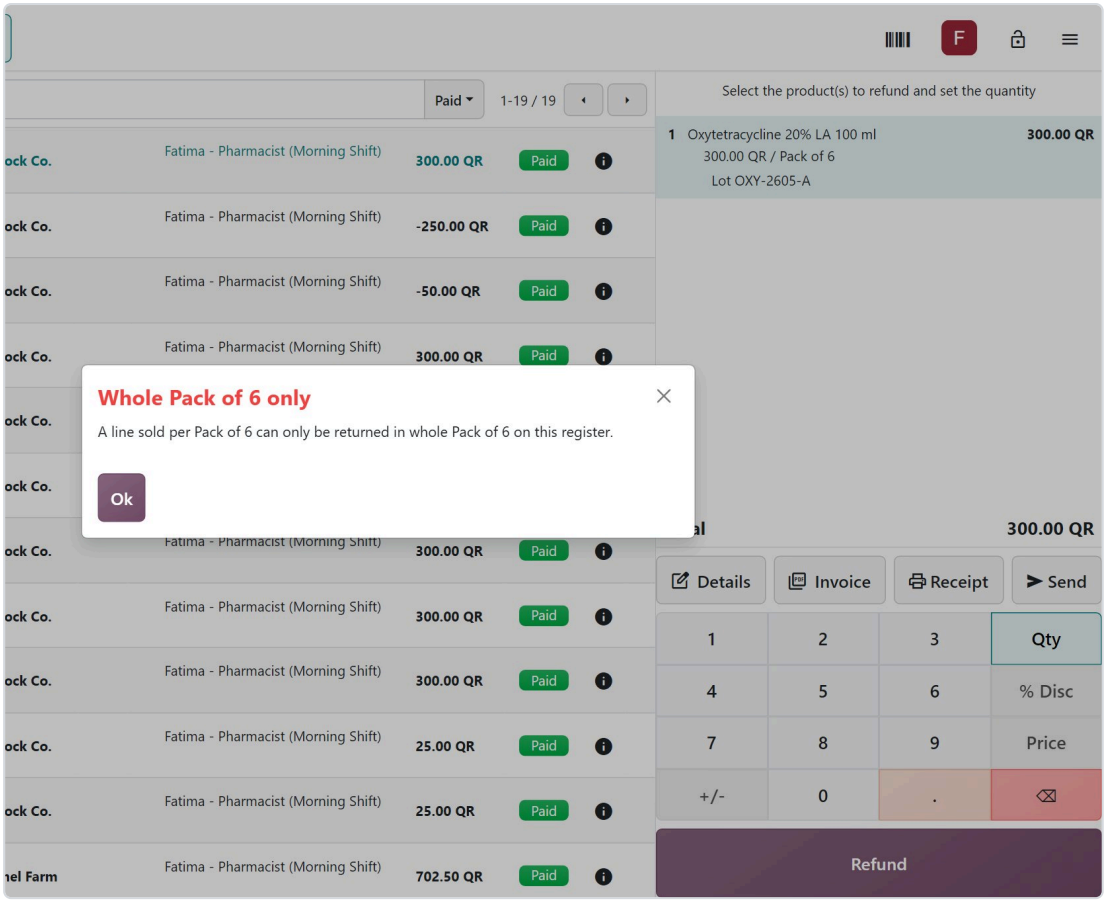

Refund order in the back office: −1.00 Units at 50.00, linked to the original order (Refunded Orders button). Cost and margin are for 1 piece.

Return picking BR1/POS/00018: 1 Unit back into BR1/Stock (lot OXY-2605-A). The original sale moved 6 Units out.

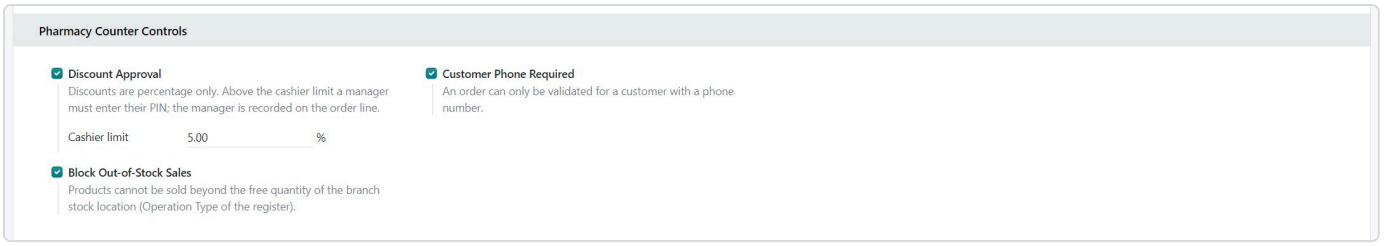

The rest of the pack: "1 Units refunded"; pressing 1 now returns the 5 pieces left ("Return 5 Units at 50.00 QR each"), refunded −250.00.

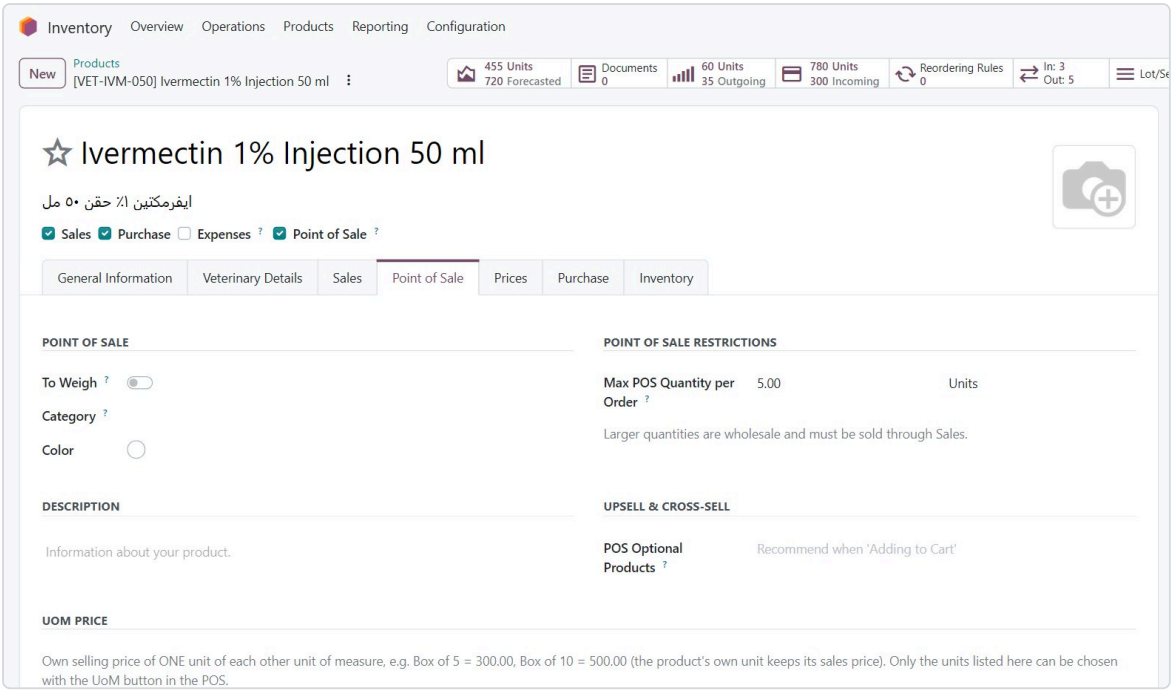

Block Fractional Returns on: no Return Units button; 0.5 pack refused, “can only be returned in whole Pack of 6 on this register”. 1 whole pack is refunded 300.00.

4. DES00135 – alfiafy_pos (Branch 1 register)

All screens below were recorded on the Branch 1 - Al Wakra register, logged in as cashier **Fatima** (PIN 1111). The controls are set per register in Point of Sale > Configuration > Settings.

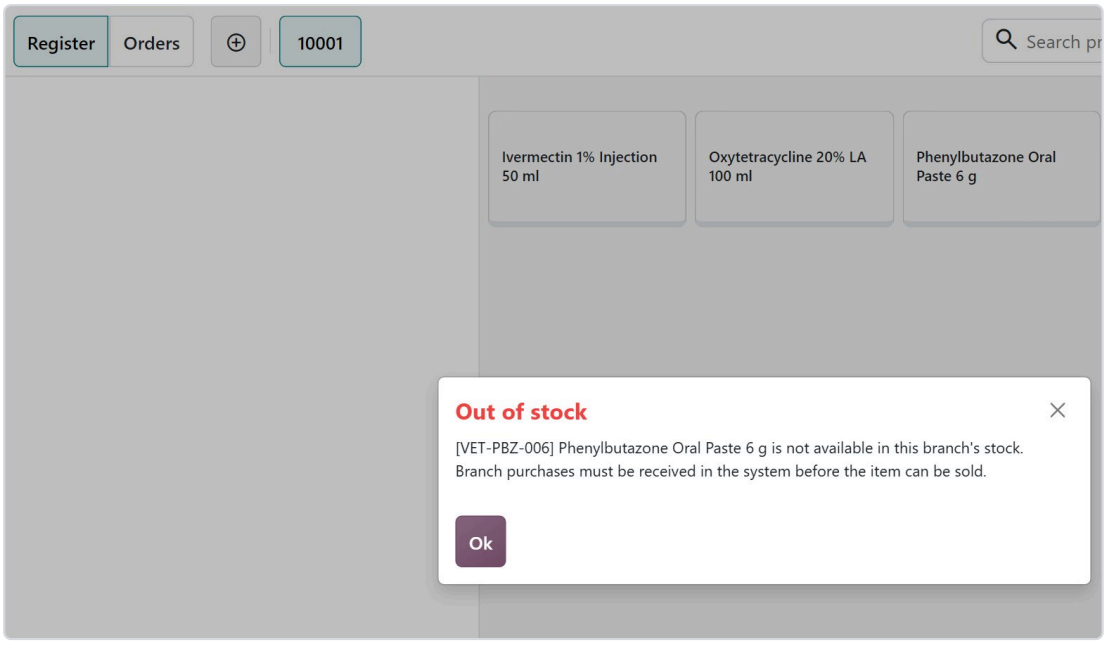

Settings > Pharmacy Counter Controls (Branch 1): discount approval with a 5 % cashier limit, customer phone required, block out-of-stock sales.

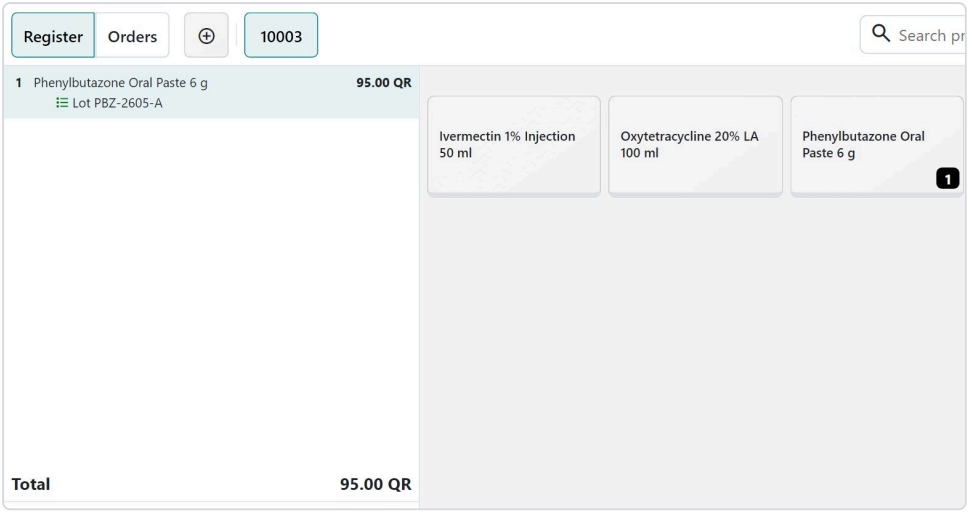

Ivermectin – Point of Sale tab: Max POS Quantity per Order = 5 Units. 0 means no limit.

4.1 Test 6.2 – no sale beyond branch stock

Stock is read live from the server for the register's stock location (BR1/Stock), minus what the open session has already sold. It is checked when the product is added, when the quantity is raised, and again at payment.

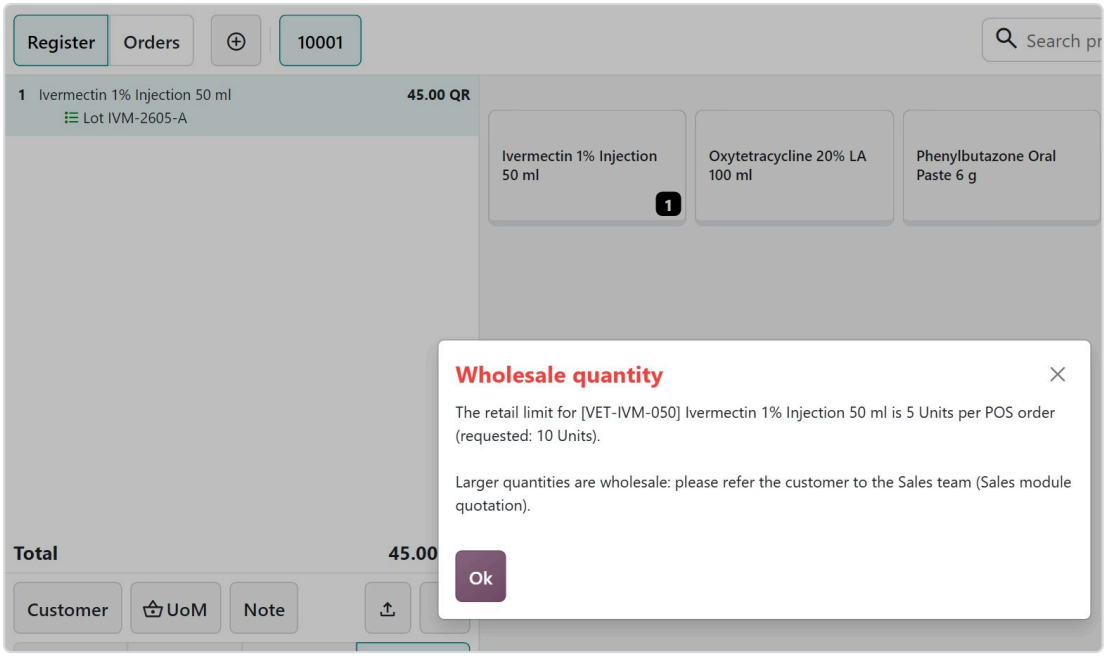

Phenylbutazone with 0 units in Branch 1: refused with "Out of stock". Nothing is added to the order.

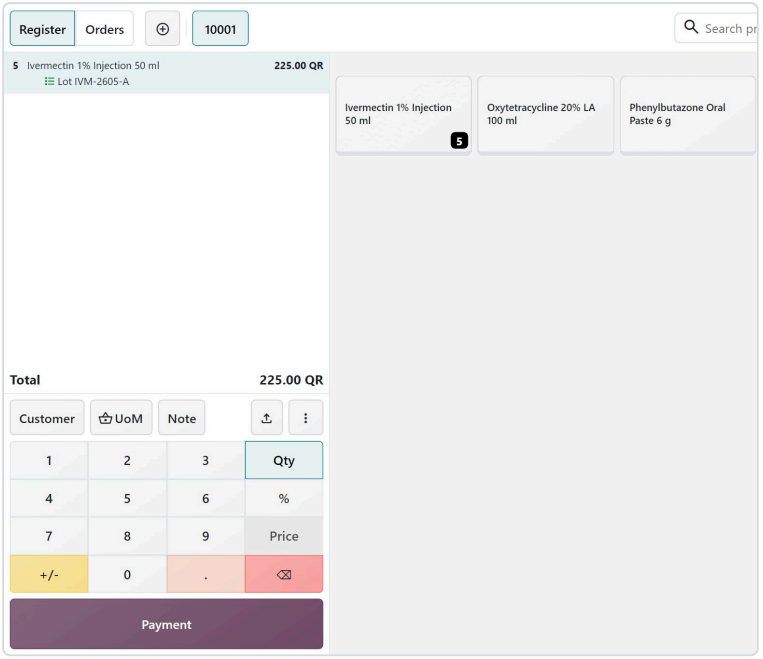

After an internal transfer of 6 units to Branch 1: the product can be sold. Raising the line to 9 was then refused ("Only 6 … available").

4.2 Test 6.3 – wholesale quantity cap

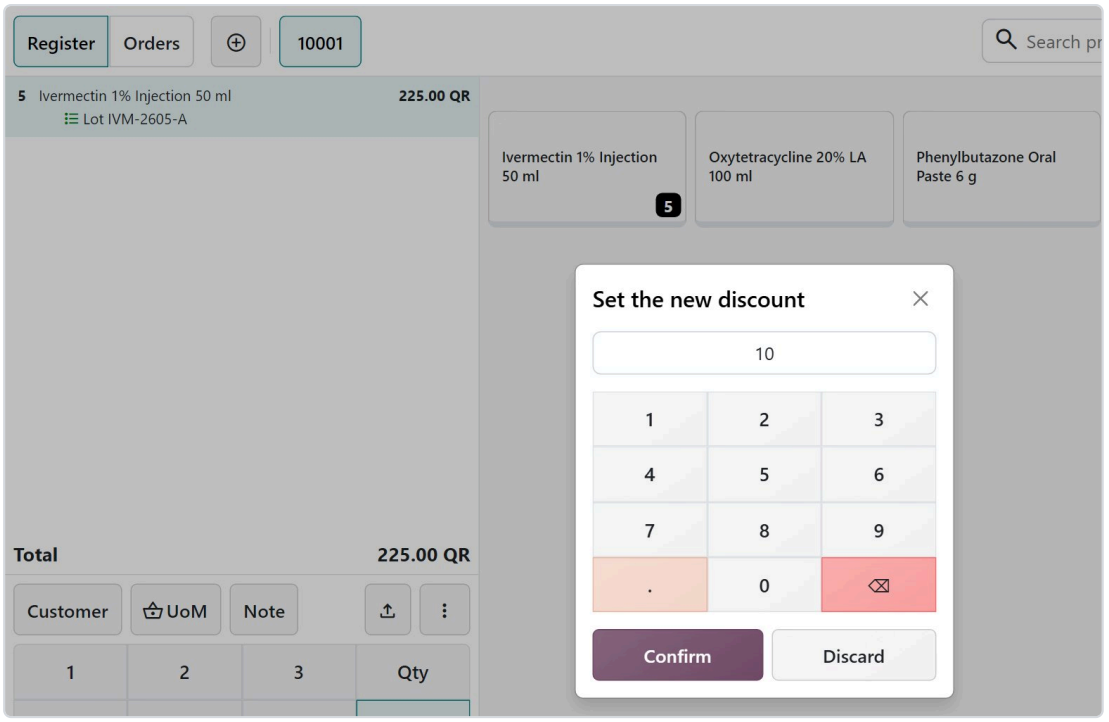

Ivermectin, quantity 10 typed: refused, the retail limit is 5 Units per POS order; the customer is referred to the Sales team. The line keeps quantity 1.

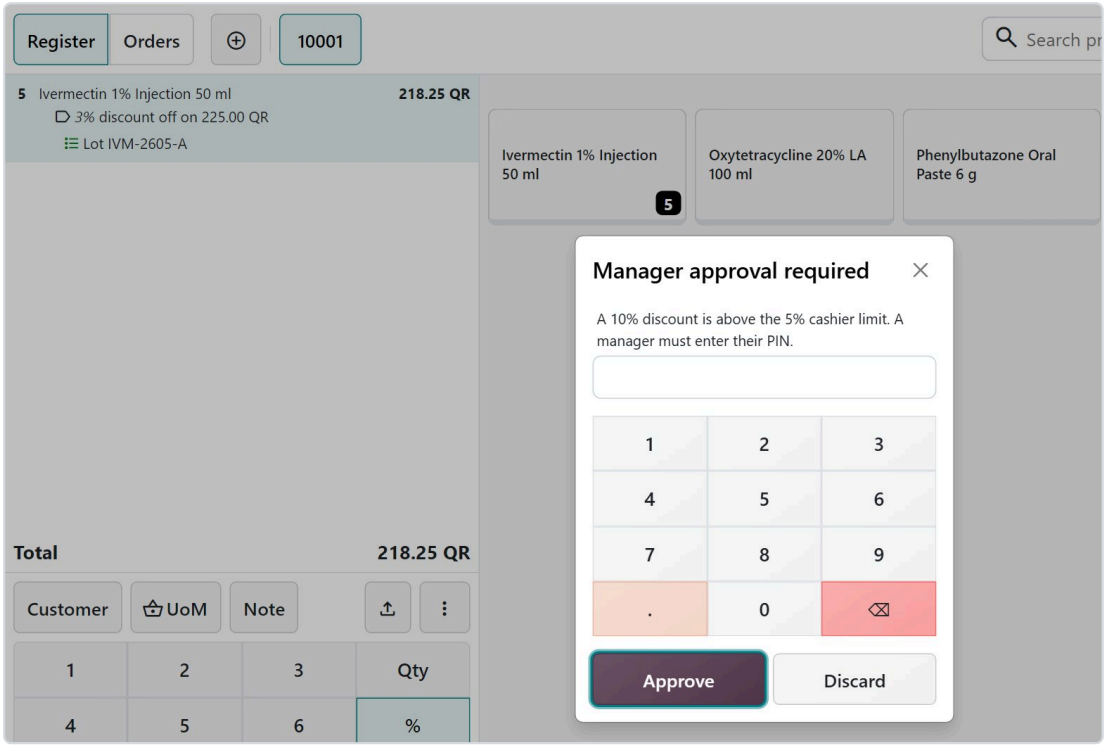

Quantity 5 accepted. The keypad **Price** key is greyed out for the cashier, so discounts can only be given as a percentage.

4.3 Test 6.4 – discount limit and manager PIN

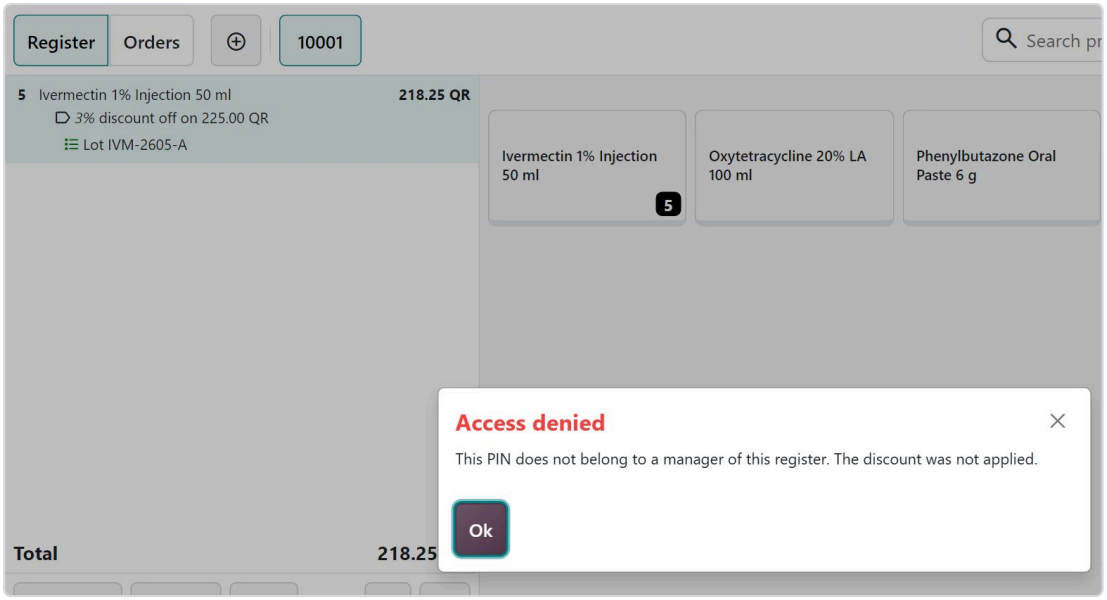

Pressing **%** opens a popup for the whole percentage. Up to the cashier limit (5 %) it is applied at once; above it a manager of the register must type their PIN.

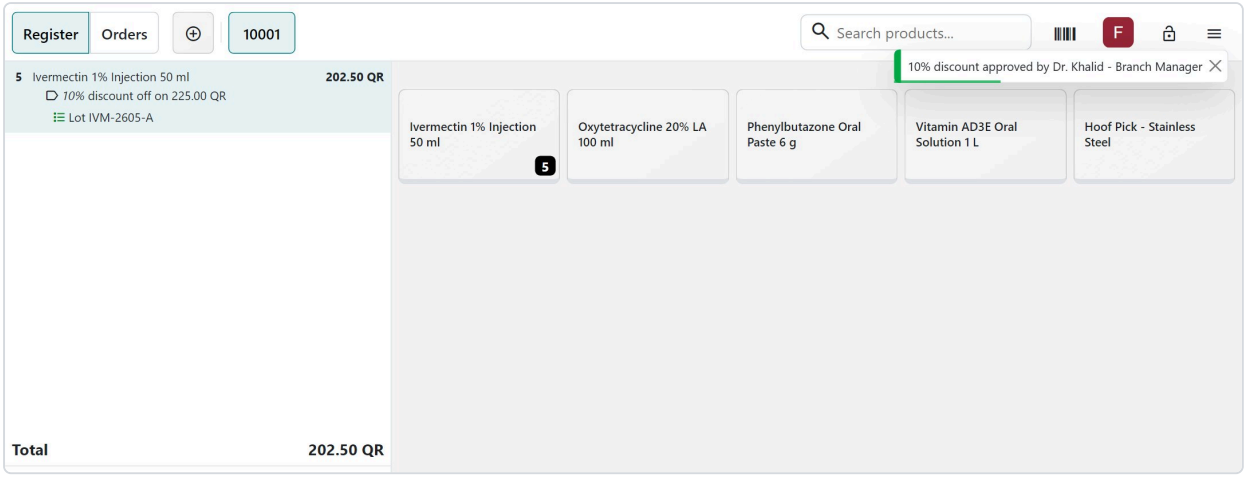

% key: "Set the new discount" popup (3 % was applied first without a PIN; here 10 % is typed).

10 % is above the 5 % cashier limit: "Manager approval required". The line still shows the 3 % already given.

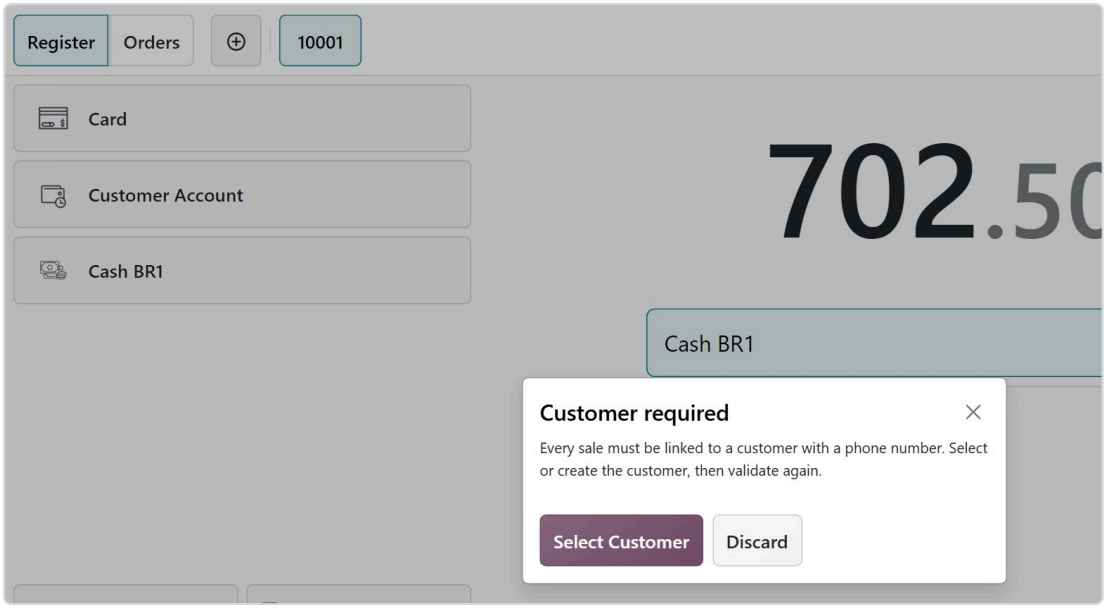

Cashier PIN 1111 typed: "Access denied"; the discount stays at 3 %.

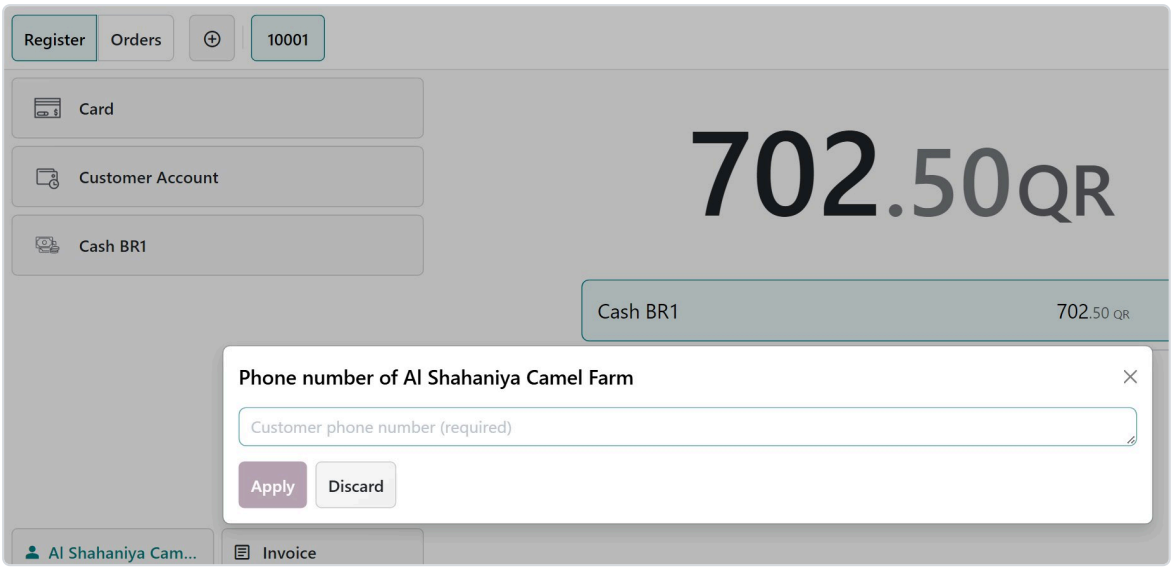

Manager PIN 9999 (Dr. Khalid): 10 % applied, notification "10% discount approved by Dr. Khalid - Branch Manager". The approver is saved on the order line (see the back-office order in section 3).

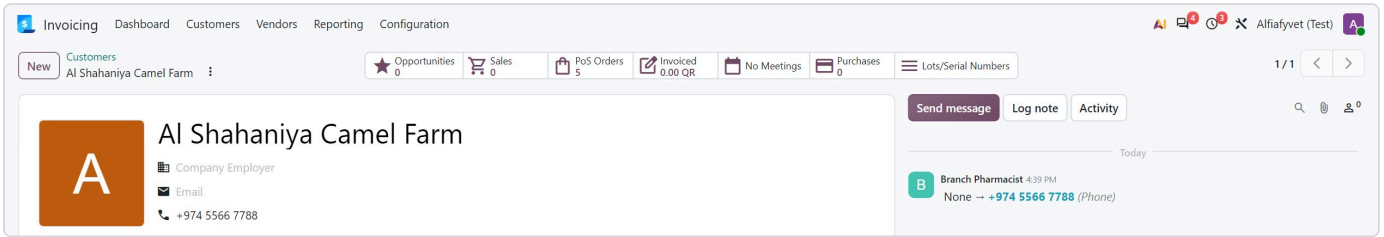

4.4 Test 6.1 – customer phone number

Validate without a customer: "Customer required" with a Select Customer button; the order is not validated.

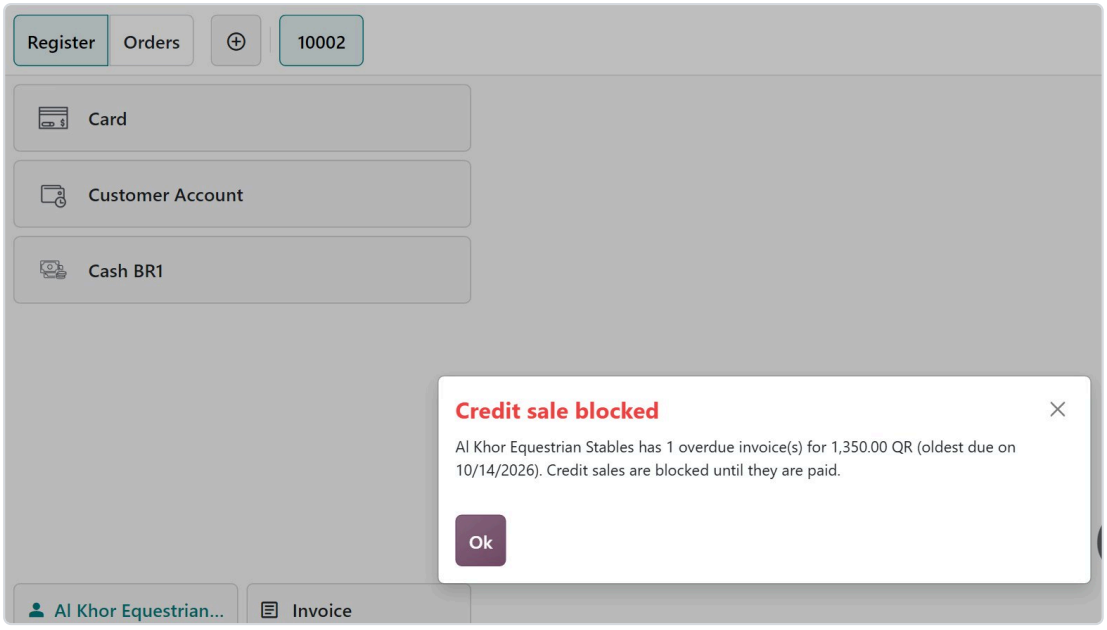

Customer without a phone (Al Shahaniya Camel Farm): the phone number must be typed. Discard leaves the order unvalidated; Apply saves the number on the customer and the order is validated.

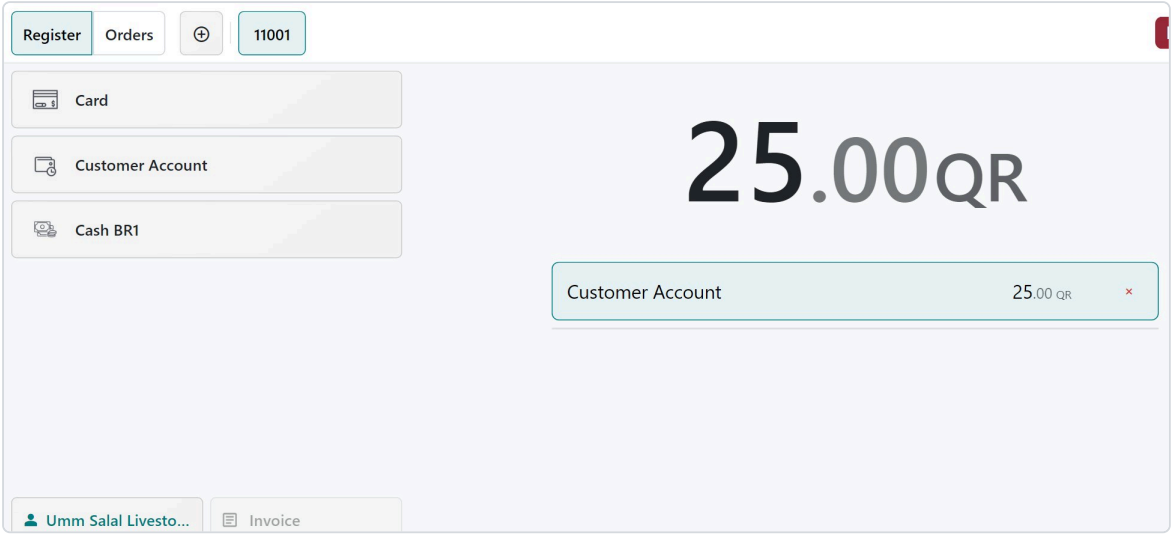

Customer record afterwards: phone +974 5566 7788, written by the POS user (Branch Pharmacist).

4.5 Test 6.5 – credit hold on Customer Account

Checked live on the server when Customer Account is selected and again at validation: overdue unpaid invoices (unless the customer's "Block on Overdue Invoices" is off), and the credit limit when the Accounting setting is on (balance + confirmed orders not invoiced + open-session credit sales + this order). Without a connection, credit sales are refused.

Al Khor Equestrian Stables: "Credit sale blocked", 1 overdue invoice for 1,350.00 QR. No payment line is added; cash or card can still be used.

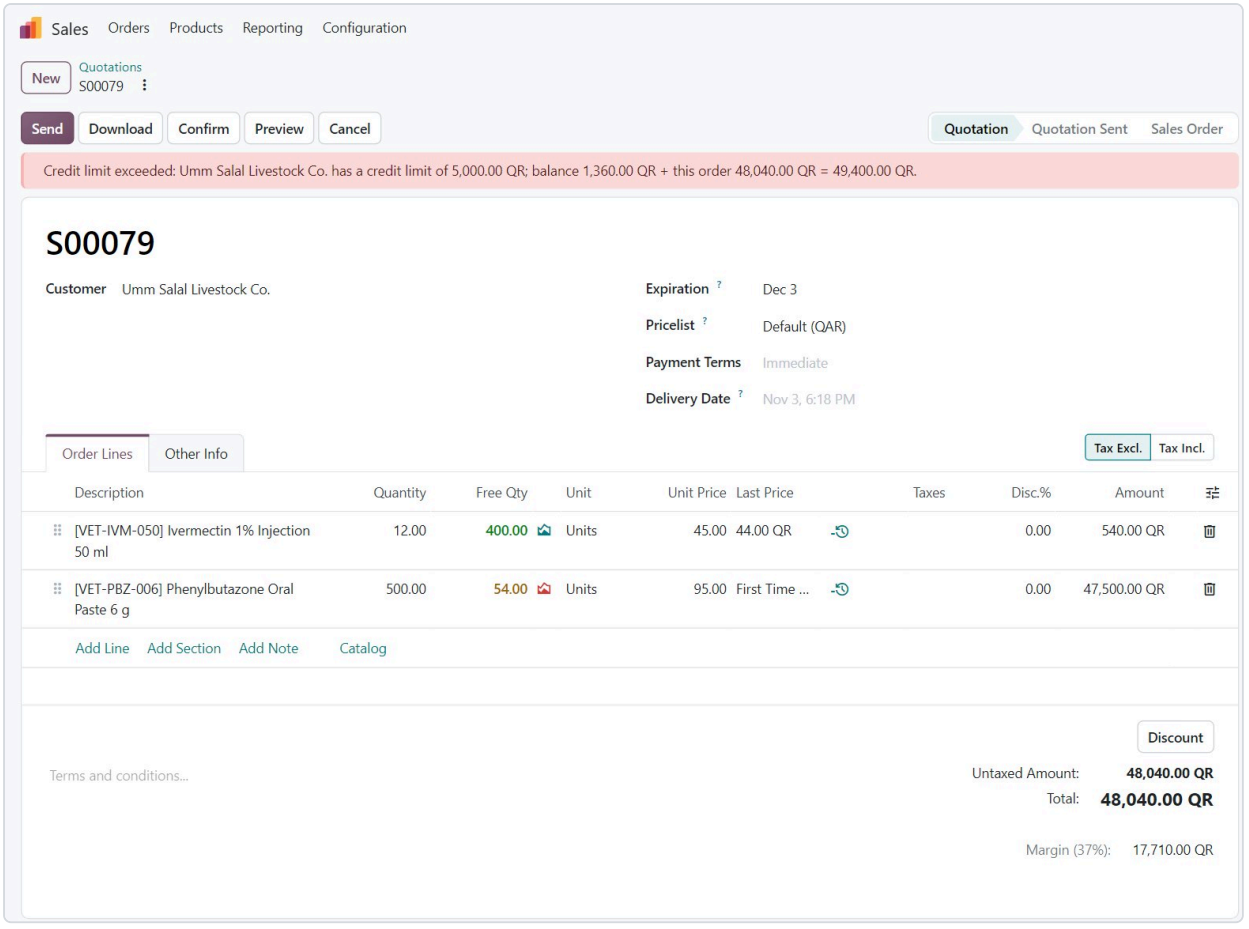

Umm Salal Livestock Co. (within its limit, nothing overdue): Customer Account accepted; the order was then validated.

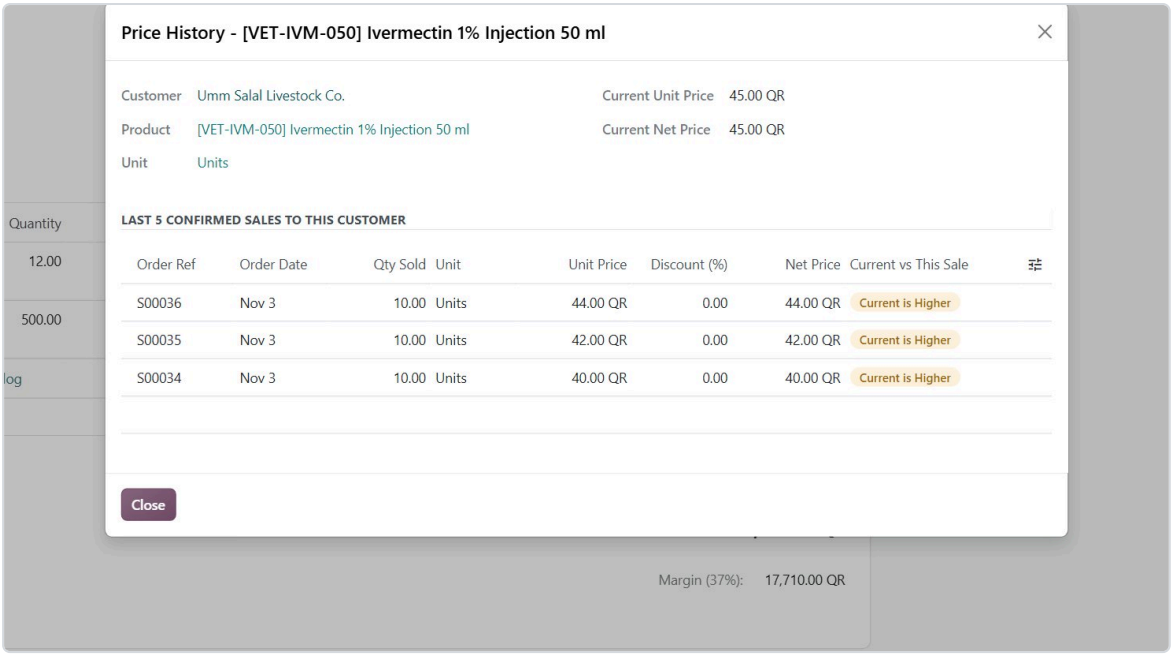

5. DES00136 – alfiafy_sale

On Confirm the checks run in this order: **stock**, then **credit limit / overdue invoices**, then the **discount approval**. A quotation can always be saved; only confirmation is stopped.

5.1 Test 6.1 – customer price history

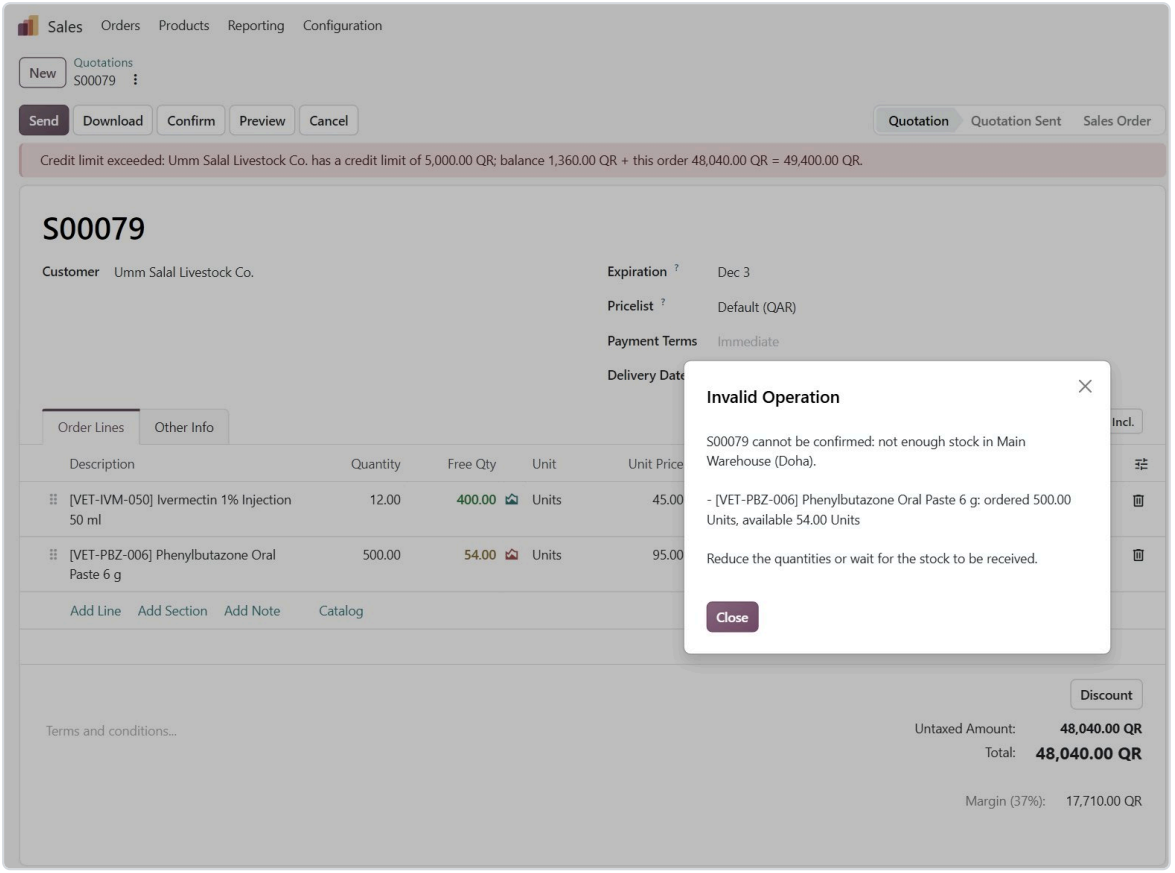

Quotation S00079 (Umm Salal Livestock Co.): Free Qty column (green = enough, orange = not enough), Last Price column (44.00 QR, or “First Time Sale” when the customer never bought the product) and the history button. The red banner is the credit limit check (5.3).

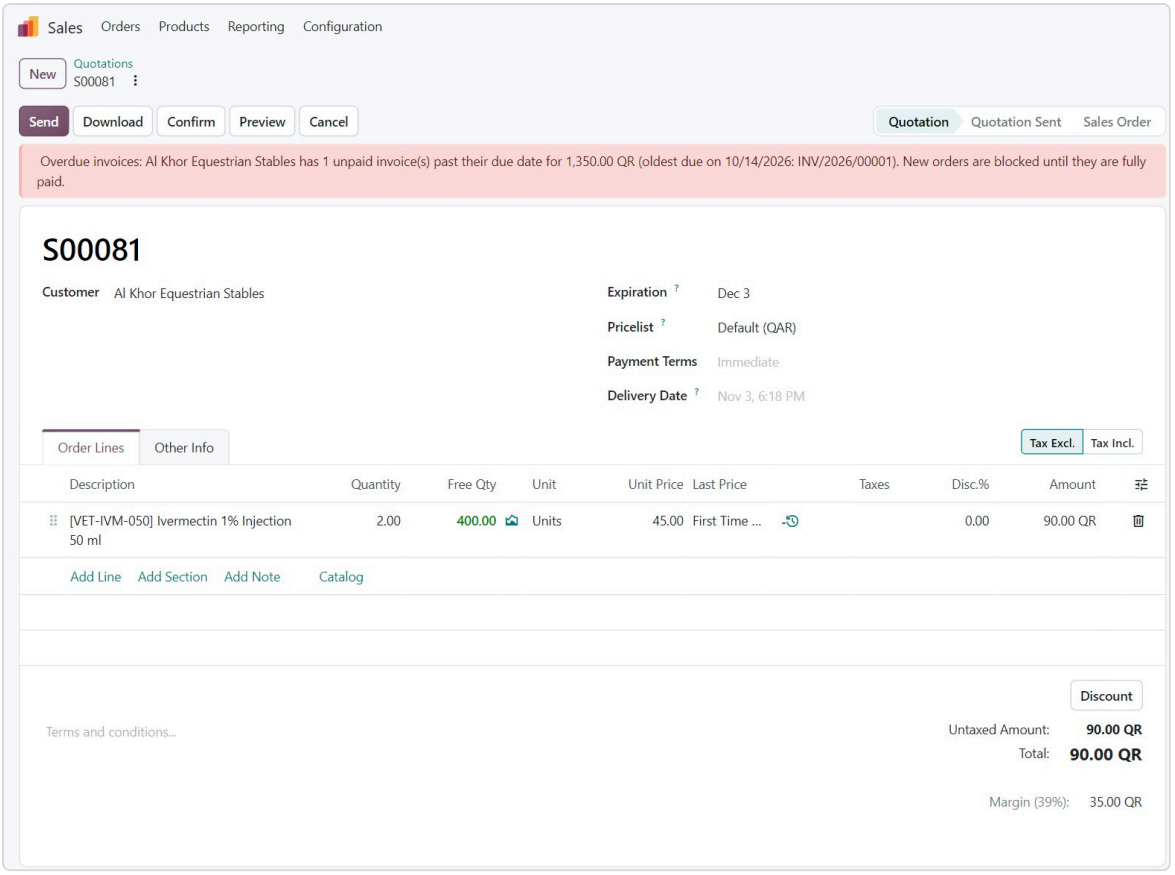

Price History popup: last confirmed sales of Ivermectin to this customer (up to 5) with quantity, unit price, discount and net price; current price 45.00 is tagged “Current is Higher” against each.

5.2 Test 6.2 – out-of-stock confirmation

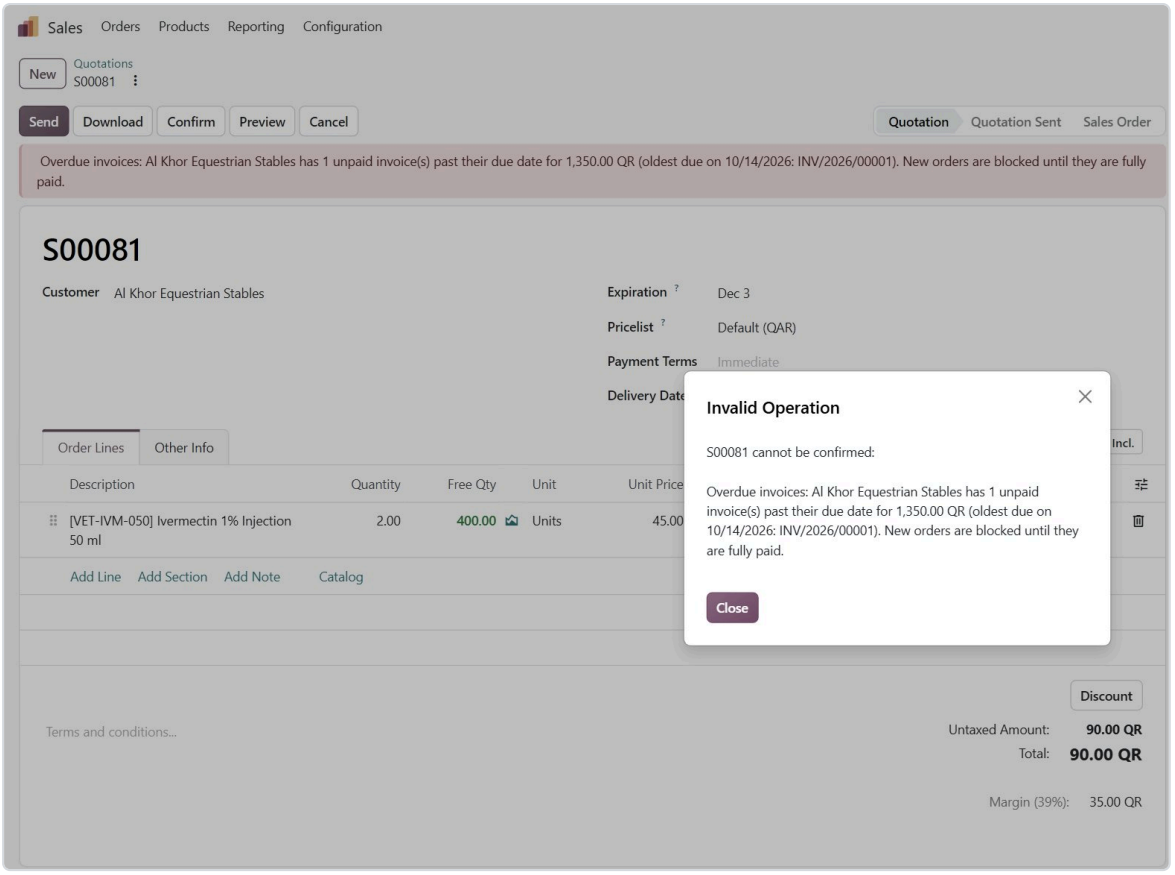

Confirm on S00079: refused, Phenylbutazone ordered 500 Units, 54 available in Main Warehouse (Doha). The stock check runs before the credit check.

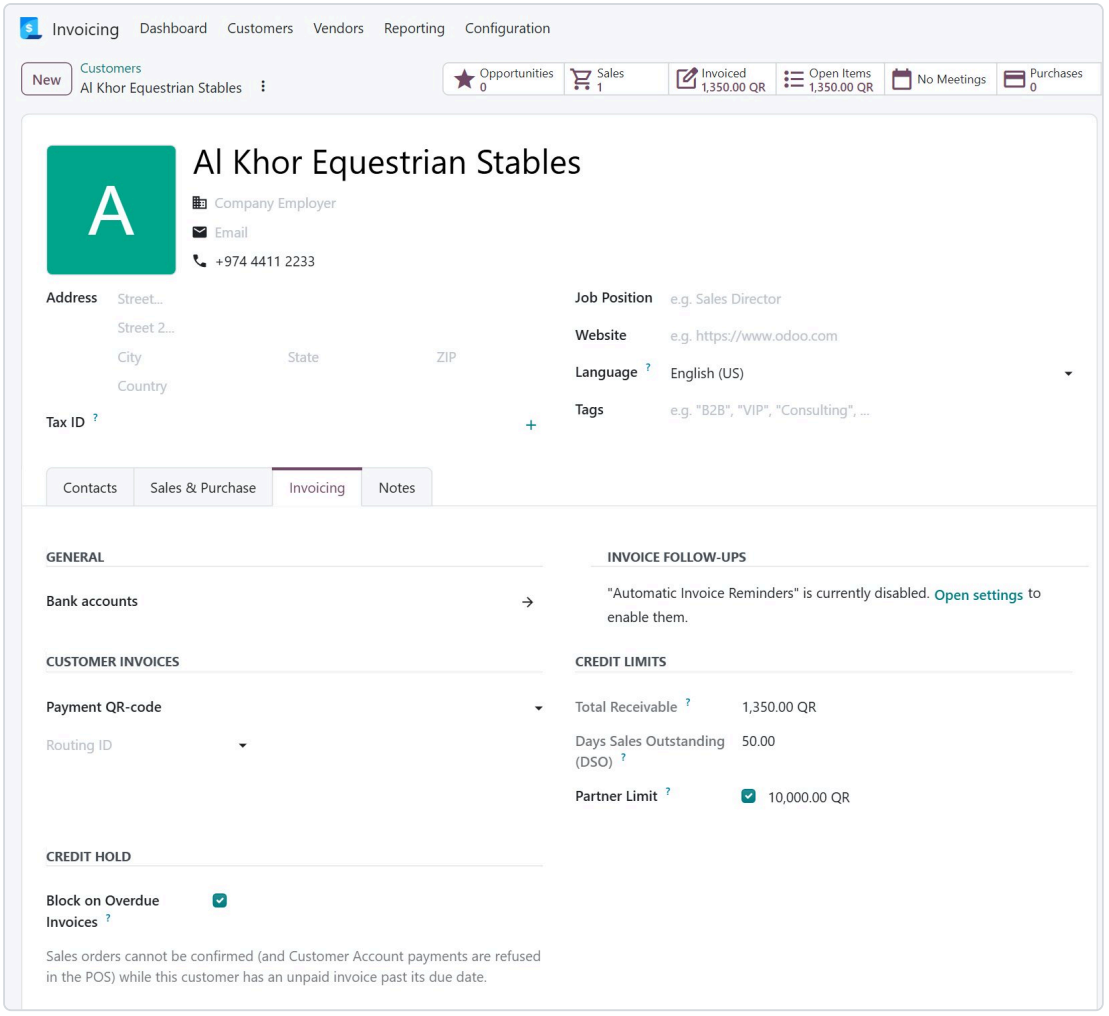

5.3 Test 6.3 – credit limit and overdue invoices

Quotation S00081 for Al Khor Equestrian Stables: red banner “Overdue invoices … INV/2026/00001 … New orders are blocked until they are fully paid.” (Odoo’s own credit warning is hidden when this banner shows, so it is not shown twice.)

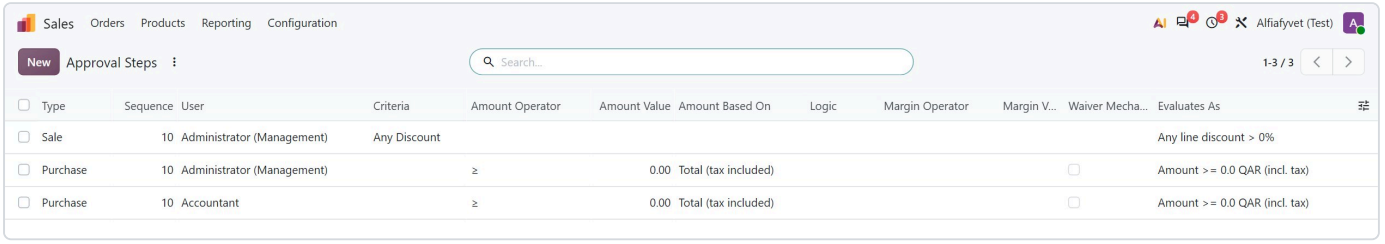

Confirm on S00081: refused with the same reason.

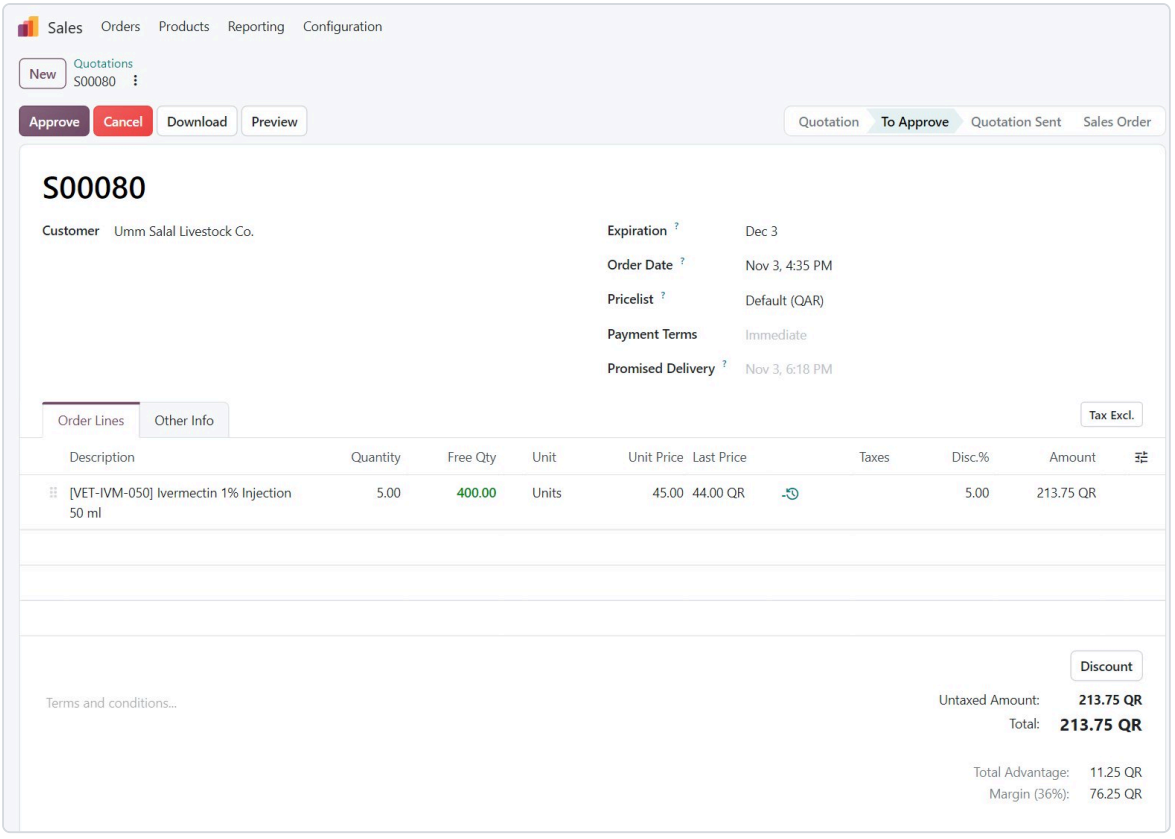

Customer – Invoicing tab: standard credit limit (10,000.00 QR) and the new "Block on Overdue Invoices" switch.

5.4 Test 6.4 – discount approval

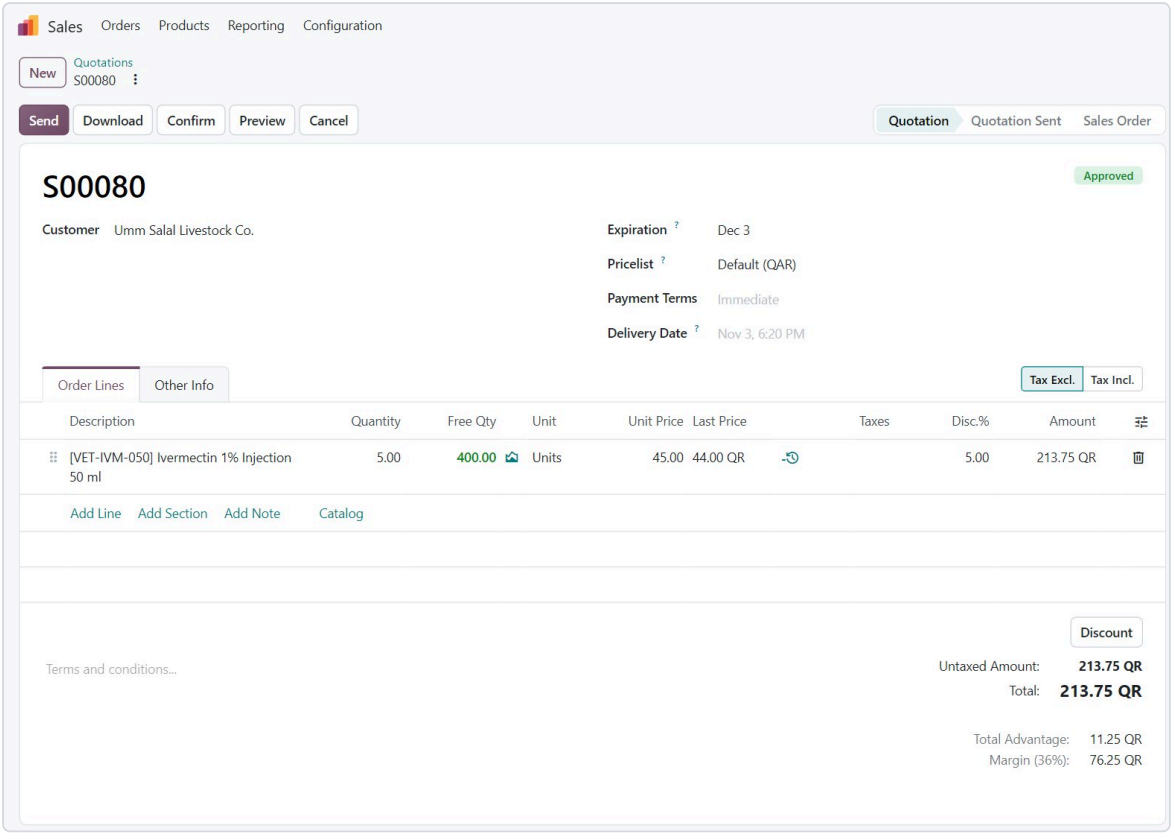

The approvals module hides Confirm on a quotation that needs approval and shows **Send for Approval** instead. The new "Any Discount" criterion makes every quotation with a line discount need approval.

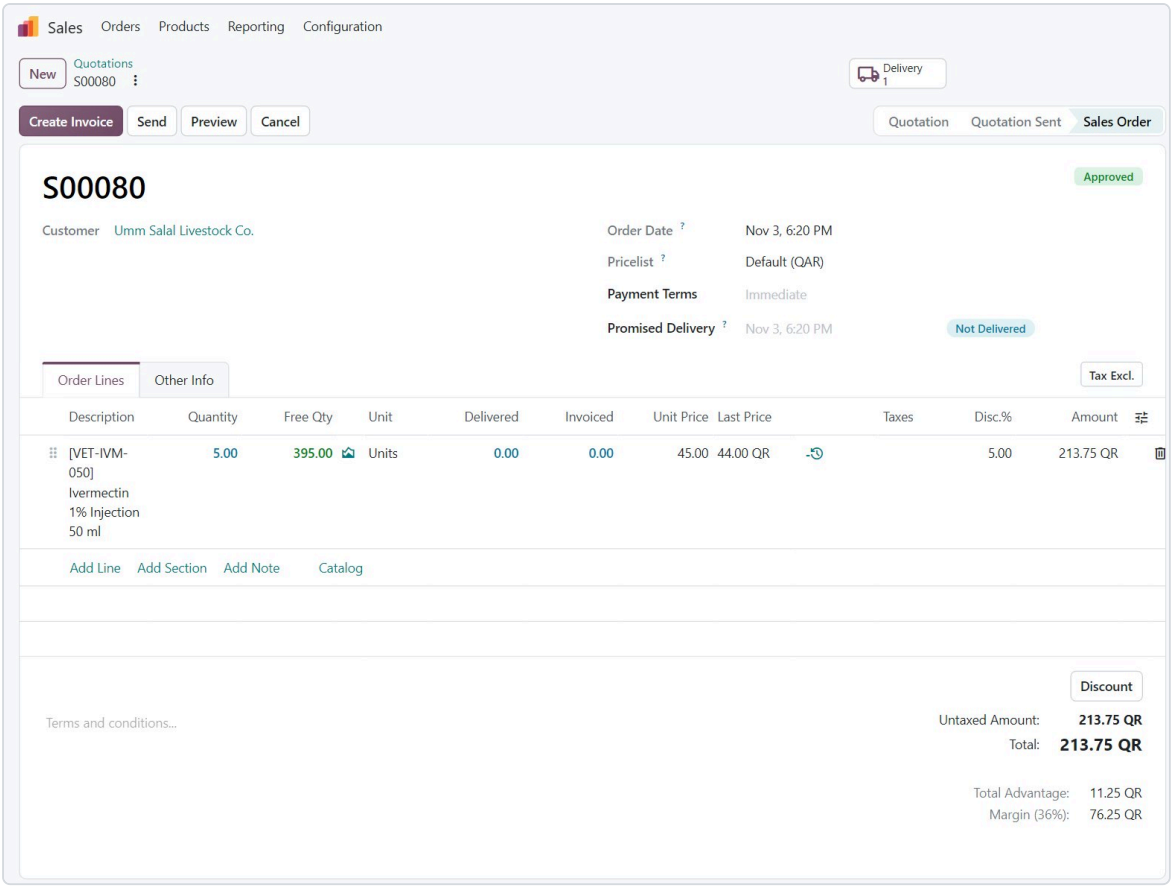

Settings > Technical > Approval Steps: the Sale / Any Discount step (administrator) created on install, next to the purchase steps from phase 2.

S00080 with a 5 % discount after Send for Approval: status To Approve, approval activity for the approver.

After Approve: back to Quotation with the “Approved” badge; Confirm is available.

Confirmed: Sales Order with its delivery.

6. Verification results

Implementation plan tests

Plan test	Check	Automated test	Screen evidence	Result
POS 6.1	Phone required: no customer / no phone blocked; phone typed is saved	— (POS screen logic)	Section 4.4	**Pass**
POS 6.2	0 stock blocked; allowed after transfer; above stock blocked; sales of the open session counted	test_02, test_03	Section 4.1	**Pass**
POS 6.3	Quantity above max refused, max accepted	test_01 (field loaded)	Section 4.2	**Pass**
POS 6.4	≤ 5 % without PIN; cashier PIN refused; manager PIN applies and is saved	test_04	Section 4.3 and 3	**Pass**
POS 6.5	Overdue customer refused on Customer Account; good customer accepted; credit limit	test_05	Section 4.5	**Pass**
Multi-UoM	Each unit its own price; unit without a price not offered; Box of 10 moves 10 Units; lots	test_06, test_07, test_08	Section 3	**Pass**
Returns	1 piece of a Pack of 6 refunded 50.00, stock +1; rest refunded per piece; whole packs only when blocked	test_09	Section 3.1	**Pass**
Sales 6.1	Last price and history (last 5, other customers and cancelled orders excluded)	test_01	Section 5.1	**Pass**
Sales 6.2	Out-of-stock quotation saved, confirm refused, lines of the same product added up	test_02	Section 5.2	**Pass**
Sales 6.3	Credit limit and overdue holds; released after payment; switch off per customer	test_03, test_04, test_05	Section 5.3	**Pass**
Sales 6.4	Discount routed to To Approve; approve then confirm; hard stops first	test_06, test_07	Section 5.4	**Pass**
Sales 5.2	Salesman cannot edit, reset or delete a posted invoice	test_08	—	**Pass**

Full run: `-u pos_multi_uom_price,alfiafy_pos,alfiafy_sale,… --test-enable` on the 7 project modules → **0 failed, 0 error(s) of 39 tests** (run again after the last changes: each unit its own price, returns of single pieces). The POS scenario (25 checks) and the Sales scenario (8 checks) were run with a browser robot on the test database, with no JavaScript errors; the UoM list and the returns (single piece, rest of the pack, blocked setting) were then run on the Branch 1 register (sections 3 and 3.1).

New automated tests (17)

Module	Test	What it checks	Result
alfiafy_pos	`test_01_pos_loaded_fields_and_defaults`	New fields reach the POS; defaults; saved fields are plain fields	**Pass**
alfiafy_pos	`test_02_branch_free_qty`	Free quantity of the register's branch location only	**Pass**
alfiafy_pos	`test_03_free_qty_counts_sales_not_yet_delivered`	Paid orders of the open session are deducted	**Pass**
alfiafy_pos	`test_04_discount_approver_saved`	Approving manager stored on the order line	**Pass**
alfiafy_pos	`test_05_credit_hold`	Overdue invoice, paid invoice, credit limit	**Pass**
alfiafy_pos	`test_06_uom_price_rows`	UoM price rules and copy to variants	**Pass**
alfiafy_pos	`test_07_order_in_box_moves_stock`	Order in boxes moves units; cost per unit sold	**Pass**
alfiafy_pos	`test_08_lot_tracked_product_sold_in_box`	1 Box of 10 of a lot product: 10 Units of the lot, no backorder	**Pass**
alfiafy_pos	`test_09_refund_single_pieces_of_a_pack`	1 piece of a Pack of 6 refunded 50.00, stock +1, rest refunded per piece	**Pass**
alfiafy_sale	`test_01_customer_price_history`	Last price, 5-sale history, Higher / Lower / Same, First Time Sale	**Pass**
alfiafy_sale	`test_02_out_of_stock_blocks_confirmation`	Draft saved, confirm blocked, lines added up	**Pass**
alfiafy_sale	`test_03_credit_limit_hold`	Confirm blocked above the credit limit	**Pass**
alfiafy_sale	`test_04_overdue_invoice_hold`	Blocked while overdue, released after payment	**Pass**
alfiafy_sale	`test_05_overdue_hold_can_be_switched_off`	Block on Overdue Invoices off	**Pass**
alfiafy_sale	`test_06_discount_routes_to_approval`	To Approve, approve, confirm	**Pass**
alfiafy_sale	`test_07_hard_stops_before_discount_approval`	Stock / credit checked before approval	**Pass**
alfiafy_sale	`test_08_salesman_cannot_change_posted_invoice`	Posted invoice locked for salesmen	**Pass**

The other 22 tests (alfiafy_product_base 6, alfiafy_purchase 8, restricted_cost_access 5, sale_and_purchase_approvals_steps 3) from phases 1–2 still pass.

7. Points to confirm and open items

Where the build differs from or adds to the plan

- **Sales discount (plan 6.4 “click Confirm”)**: the approvals module replaces Confirm with **Send for Approval** when approval is needed; the result (To Approve) is the one the plan expects. If Confirm is called another way (e.g. from a list action), the order is also sent for approval. A Sale / “Any Discount” approval step for the administrator is created on install: replace the approver with the real manager.
- **POS discount entry**: the % key opens a popup for the whole value, so the PIN is asked once for the final percentage, not on every key press. The keypad Price key is reserved to managers so that no fixed-amount discount can be given. If “Discount Approval” is switched off on a register, there is no discount limit.
- **Live checks**: stock and credit are read from the server at the counter, not from the data loaded when the register opened (Odoo 20 keeps products and customers cached in the browser). Offline, the stock check uses the last figures received and credit sales are refused.
- **Wholesale cap** counts all lines of the product in the order (in the product unit), so it cannot be bypassed with a second line or a box.
- **Returns of single pieces**: refunded at the price the customer paid per piece (Pack of 6 at 300.00 → 50.00). This is the only place a price is divided, and only for a return. Fractional returns are allowed by default; “Block Fractional Returns” switches them off per register.
- **Dependencies**: `pos_stock` (alfiafy_pos) and `sale_stock` (alfiafy_sale) are needed in Odoo 20 for branch / warehouse stock.
- **Credit limit** only applies when the Accounting setting “Customer Credit Limit” is on (it is on in the test DB). “Block on Overdue Invoices” is also respected by the POS.
- **Phone rule**: at least 7 digits, phone characters only. Odoo 20 has no separate mobile field on contacts.
- **Price history**: the order reference is shown as text, so a salesperson who cannot open a colleague’s order still sees the history.

Open items

- **Unit prices**: enter a price in the UOM Price table for every unit the counter sells (e.g. Box of 5 = 300.00); a unit without a price cannot be chosen in the POS.
- **Packaging barcodes**: scanning a box barcode in the POS still adds 10 units at the unit price (standard Odoo), not 1 Box of 10 at the box price. Tell us if this should change.
- **Values to confirm with Alfiafyvet**: cashier discount limit (5 % used), max POS quantity per product, credit limits, discount approver(s).
- **Branches**: 2 of the 6 branches are set up, with placeholder names; the remaining registers and staff follow the same pattern.
- **Oman**: taxes / VAT for the Oman company are not configured.
- **Test data**: sales taxes were removed from the 5 test products, the default pricelist was set to QAR, and Oxytetracycline got a Pack of 6 price of 300.00. Repeated test runs left several identical test orders in the Branch 1 session (including Pack of 6 sales and refunds for Umm Salal Livestock Co.).
- Nothing was committed or pushed to the `testalfiafyvet` repository. The 19.0 version of pos_multi_uom_price was replaced in place.

How to run

Start the test server:

```
.venv20\Scripts\python.exe odoo\odoo-bin -c odoo\odoo.conf --addons-path=enterprise-20.0,odoo\addons,testalfiafyvet -d alfiafy20_test -p 8021
```

Logins: `admin / admin`; POS: `pharmacist / Test@1234` → register “Branch 1 - Al Wakra” → PIN 1111 (cashier) or 9999 (manager).

Re-run the tests:

```
... -d alfiafy20_test -u pos_multi_uom_price,alfiafy_pos,alfiafy_sale --test-enable --test-tags /alfiafy_pos,/alfiafy_sale --stop-after-init
```

Install on another database: add `testalfiafyvet` to the addons path and install `alfiafy_pos` and `alfiafy_sale` (they pull in the other modules).
