Alfiafyvet – Odoo 20

DES00140 **alfiafy_account_reports**: Financial Intelligence, Branch Analytics & Executive Dashboards

Build and test report · 4 November 2026 · AGM Global Services
Repository folder: `testalfiafyvet/alfiafy_account_reports` · Test database: `alfiafy20_test`

1
new module (DES00140)
BRD 1.6 #1, 1.7 #1 and #3

5 / 5
automated tests of the module
passed (plan tests 7.1–7.3 + 2)

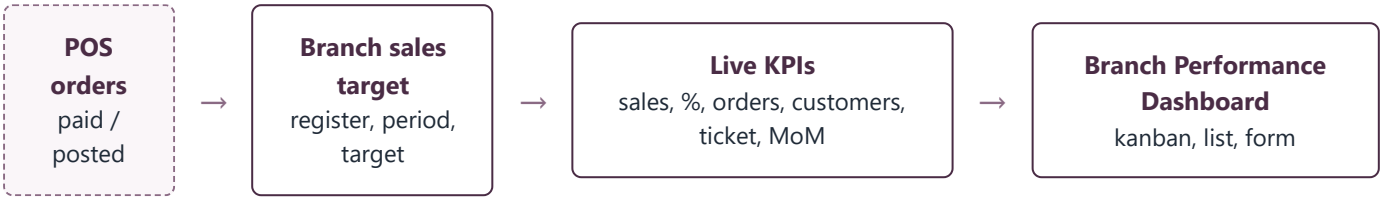

11 / 11
checks on the screens (POS → P&L → dashboard)

97.47 %
Al Wakra, October 2026:
31,190 of a 32,000 QAR target

Branch P&L (Point #23)

Branch targets and KPIs (Point #24) · fast / slow movers (Point #29)

Dashed boxes are standard Odoo; the module adds the rest.

What was done

- Built `alfiafy_account_reports` from the implementation plan (phases 1–7), with the dependencies of the plan.
- Analytic plan **Branches** with 8 accounts. Each POS register gets a Branch Analytic Account; the session closing entry tags its sales revenue with it, so the standard Profit & Loss shows one column per branch.
- New **POS Branch Sales Target** with live KPIs and the **Branch Performance Dashboard**; favorites **Fast-Moving Items** / **Slow-Moving Items** in Point of Sale > Reporting > Orders.
- Ran the plan tests as automated tests and tested on the test database with three months of branch sales. Where Odoo 20 differs from the plan: section 5.

1. Module and plan coverage

Module	Ref.	Status	Version	Depends on
alfiafy_account_reports Alfiafy Financial Intelligence & Branch KPI Dashboards	DES00140	New	20.0.1.0.0	account, point_of_sale, analytic, alfiafy_product_base (as in the plan)

Plan task	Delivered
1.1–1.3 Module, manifest	Category Accounting/Reporting, version 20.0.1.0.0. Data: access rights, views, menu, analytic plan and accounts, Orders favorites.
2.1 Analytic plan and accounts	Plan **Branches**: Branch 1 - Al Rayyan, Branch 2 - Al Wakra, Branch 3 - Al Khor, Branch 4 - Al Shahaniya, Branch 5 - Umm Salal, Branch 6 - Doha Central, Main Warehouse (Wholesale), Oman Branch Operations. Shared by all companies (so the Oman company can use its account); not overwritten on module upgrade.
2.2 POS register	Field `analytic_account_id` on `pos.config`, set in Point of Sale > Configuration > Settings > Accounting > **Branch Analytic Account**.
2.3 Session closing	When a session is closed, every sales revenue line of the closing entry gets `{branch account: 100.0}` before the entry is posted; the refunds entry too (section 5: hook name in Odoo 20).
2.4 Branch P&L	Verified without code: Accounting > Reporting > Profit and Loss > **Analytic** > Accounts adds one column per branch (needs Analytic Accounting enabled).
3.1 Target and KPI model	`pos.branch.target`: register, analytic account (related, stored), start / end date, target (QAR), currency; computed name, achieved sales, achievement %, orders, customers, average ticket, MoM growth.
4.1 Form and list	Form with the target inputs and six KPI cards. List with achievement % in green (≥ 90 %), orange (70–89 %) or red (< 70 %).
4.2 Kanban dashboard	One card per target: branch and period, monthly target vs actual sales, progress bar, badges for orders, customers and average ticket, MoM arrow (▲ +X % / ▼ −X %).
4.3 Menu	Point of Sale > Reporting > **Branch Performance Dashboard** (opens the kanban; list and form available).
5.1 Fast / slow movers	Favorites **Fast-Moving Items** / **Slow-Moving Items** on Point of Sale > Reporting > Orders: measure Product Quantity, grouped by Product, sorted descending / ascending. Procedure for branch managers in section 3.6.
6.1 Access	POS managers and accounting managers: read, write, create, delete. POS users: read only (`security/ir.access.csv`, the Odoo 20 format).
7.1–7.3 Tests	Automated tests for the three plan tests plus two more (section 4).

2. How the KPIs are computed

The KPIs are read live (not stored) from the POS orders of the target's register whose status is **Paid** or **Posted** and whose order date falls in the period (dates in the user's time zone). Invoiced POS orders are included: in Odoo 20 they keep the Paid / Posted status.

KPI	Calculation
Achieved Sales	Sum of the order totals (tax included, as the plan's `amount_total`). Refund orders have a negative total and reduce it.
Achievement (%)	Achieved Sales / Sales Target × 100.
Orders	Number of these orders (refund orders included, see section 5).
Customers	Number of different customers on these orders.
Average Ticket	Achieved Sales / Orders.
MoM Growth (%)	Average sales per day of the period compared with the average sales per day of the previous calendar month: (current − previous) / previous × 100. While the period is running, only the days elapsed so far count (on 4 November: 4 days). 0 when the previous month has no sales.

> **Example (Branch 2 - Al Wakra, October 2026):** 31,190.00 sold in 217 orders to 27 customers: 97.47 % of the 32,000.00 target, average ticket 143.73. October averages 31,190.00 / 31 = 1,006.13 a day, September 27,005.00 / 30 = 900.17 a day: MoM growth +11.77 %.

The branch P&L uses the accounting entries instead: the closing entry of each session holds the revenue without tax, tagged with the branch, and the P&L adds it up per analytic account.

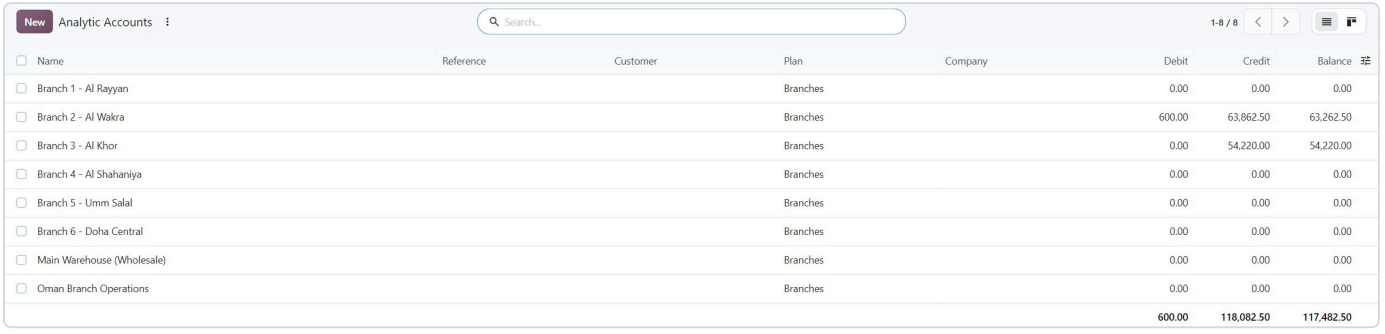

3. Test scenario on the screens

Run on `alfiafy20_test`. The test database has two POS registers; they were linked to their branch analytic accounts and filled with three months of sales (September and October loaded with their dates through the POS synchronisation, November from the earlier phases plus Al Khor sales of 1–3 November). Both sessions were then closed and six monthly targets created.

Register	Branch analytic account	Sep 2026	Oct 2026	Nov 2026 (to 4 Nov)	Closing entry
Branch 2 - Al Wakra	Branch 2 - Al Wakra	27,005.00 (155)	31,190.00 (217)	5,192.50 (21)	POSC/2026/00001 + refunds RPOSC/2026/00001
Branch 3 - Al Khor	Branch 3 - Al Khor	27,010.00 (168)	24,810.00 (171)	2,400.00 (15)	POSC/2026/00002

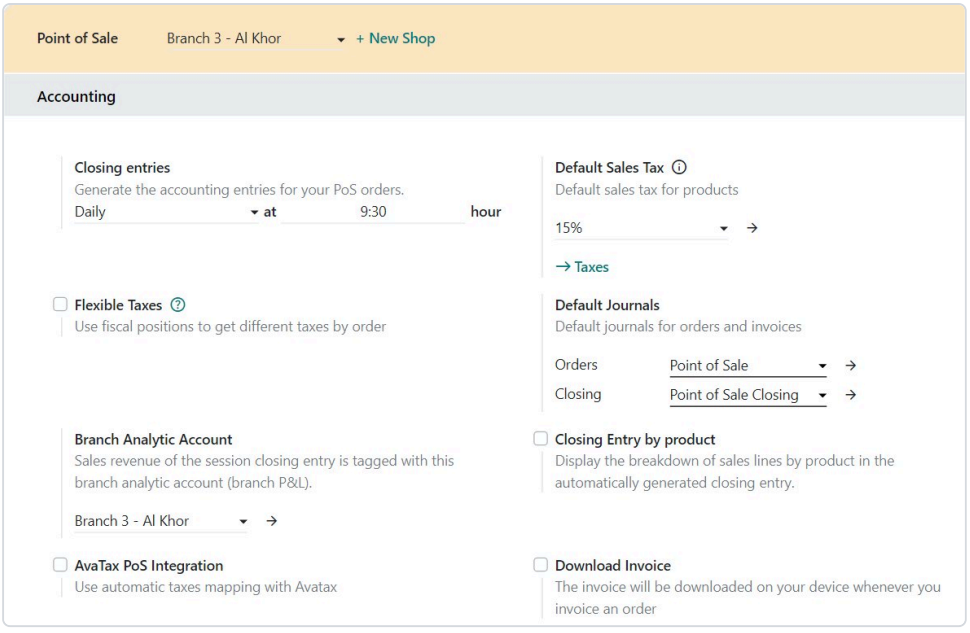

Sales in QAR (number of orders). The two registers were renamed from “Branch 1 - Al Wakra” / “Branch 2 - Al Khor” to follow the numbering of the plan (Branch 1 = Al Rayyan).

3.1 Branch analytic accounts

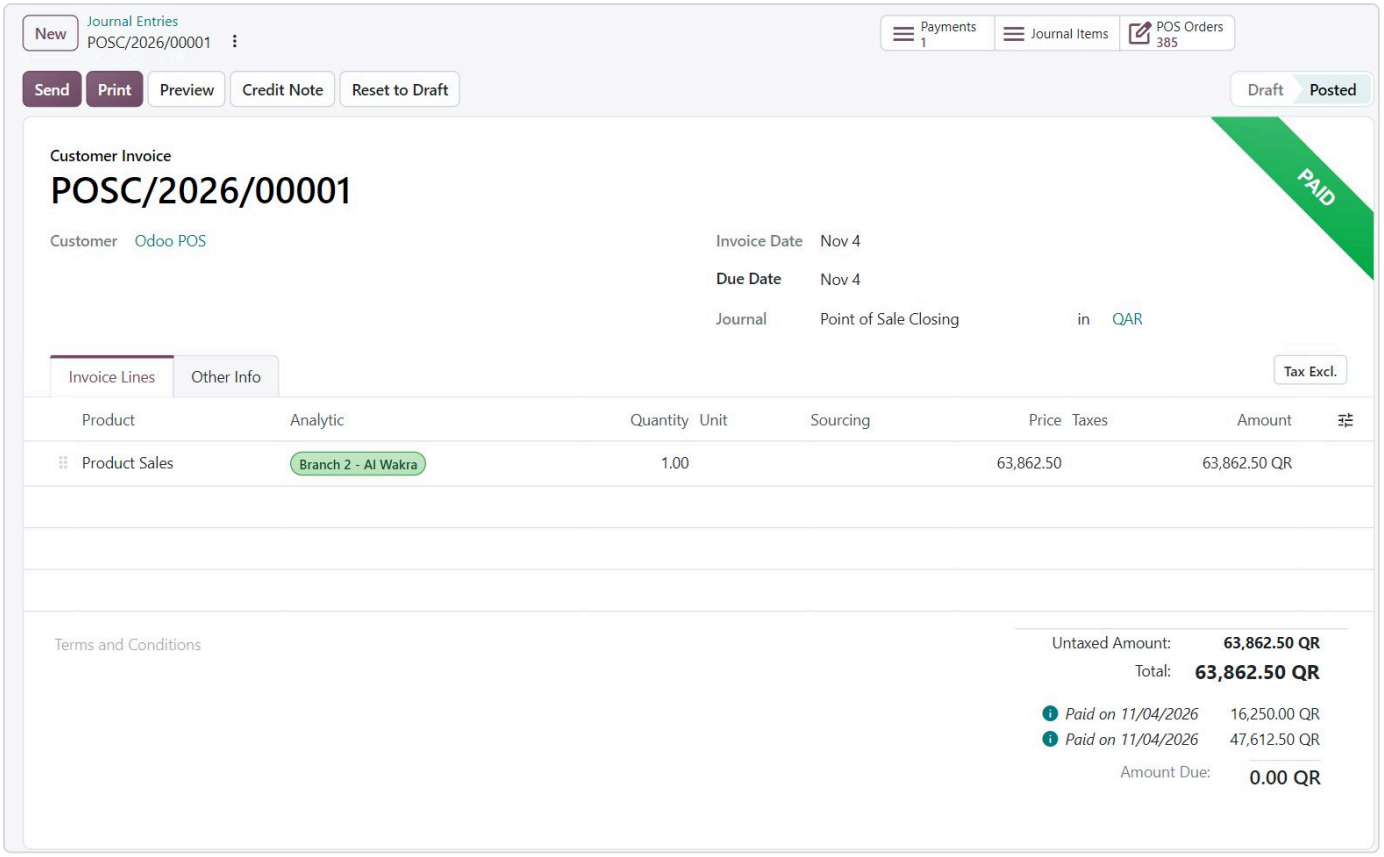

Accounting > Configuration > Analytic Accounts: the 8 accounts of the Branches plan created by the module. After closing the sessions, Al Wakra has 63,862.50 credit (sales) and 600.00 debit (refunds), Al Khor 54,220.00.

3.2 Branch analytic account on the POS register

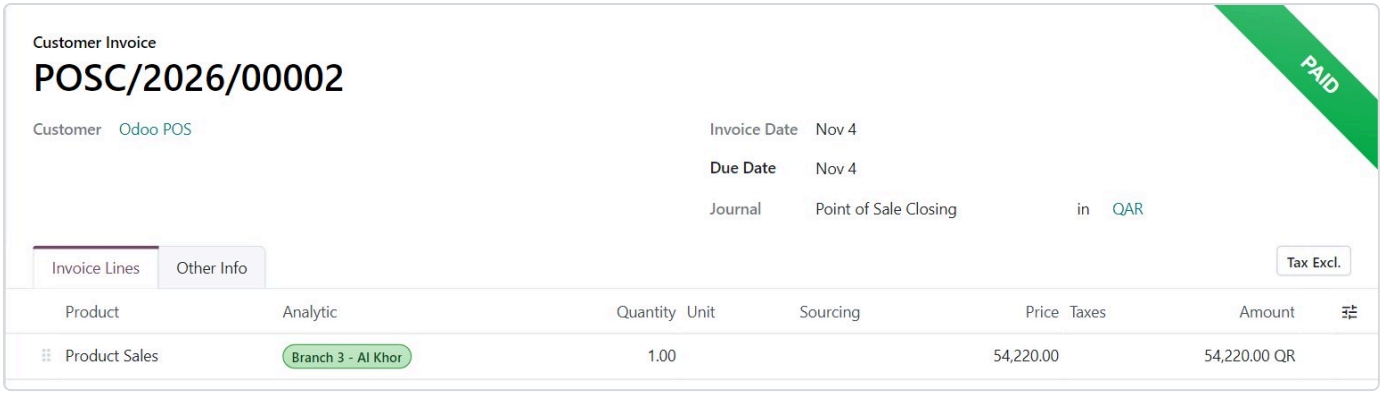

Point of Sale > Configuration > Settings, register "Branch 3 - Al Khor", section Accounting: new setting **Branch Analytic Account** = Branch 3 - Al Khor. Branch 2 - Al Wakra is set the same way.

3.3 Session closing entries tagged with the branch

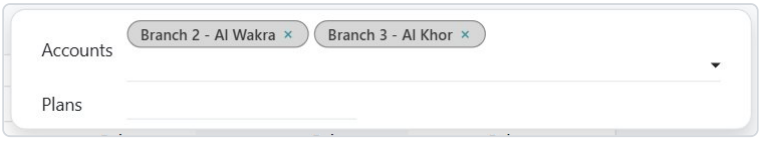

POSC/2026/00001, closing entry of the Al Wakra session (385 POS orders): the sales revenue line (63,862.50) carries **Analytic = Branch 2 - Al Wakra** (100 %). The payment lines (cash, card) are not tagged. The refunds entry RPOSC/2026/00001 (600.00) is tagged the same way.

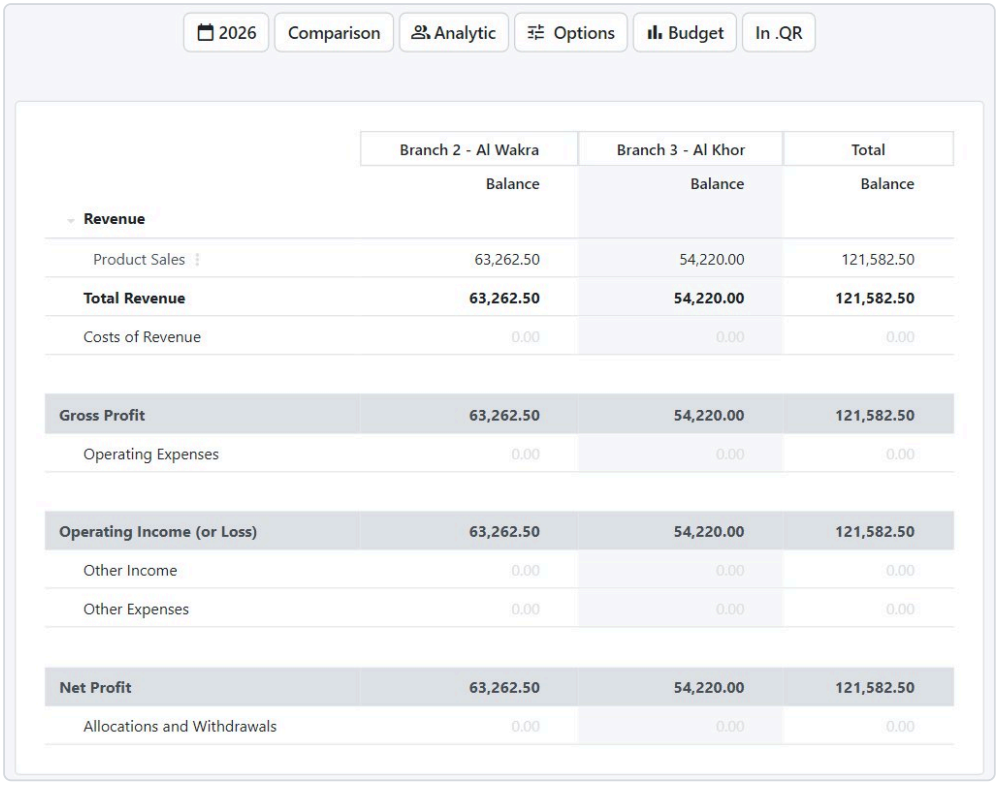

POSC/2026/00002, closing entry of the Al Khor session (354 orders): revenue 54,220.00 tagged **Branch 3 - Al Khor**.

3.4 Branch P&L (standard report)

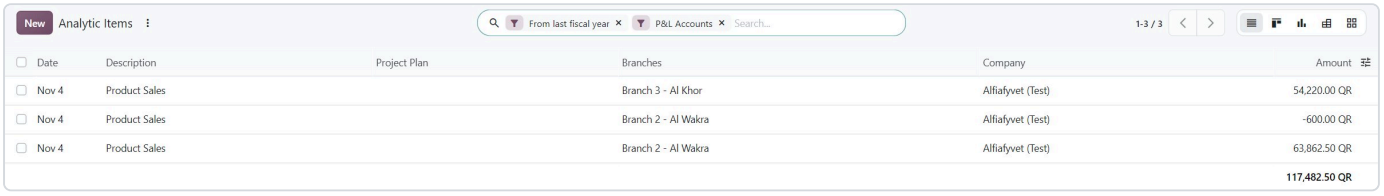

Profit and Loss > Analytic > Accounts: choose the branches to compare (or the plan).

	Branch 2 - Al Wakra	Branch 3 - Al Khor	Total
	Balance	Balance	Balance
Revenue			
Product Sales	63,262.50	54,220.00	121,582.50
Total Revenue	**63,262.50**	**54,220.00**	**121,582.50**
Costs of Revenue	0.00	0.00	0.00
Gross Profit	**63,262.50**	**54,220.00**	**121,582.50**
Operating Expenses	0.00	0.00	0.00
Operating Income (or Loss)	**63,262.50**	**54,220.00**	**121,582.50**
Other Income	0.00	0.00	0.00
Other Expenses	0.00	0.00	0.00
Net Profit	**63,262.50**	**54,220.00**	**121,582.50**
Allocations and Withdrawals	0.00	0.00	0.00

Profit and Loss 2026 with one column per branch: revenue Al Wakra 63,262.50 (sales − refunds), Al Khor 54,220.00. The Total column (121,582.50) also includes 4,100.00 of customer invoices from the earlier phases, which have no branch (section 5). Costs and expenses are 0: the test database uses periodic stock valuation and has no expense entries.

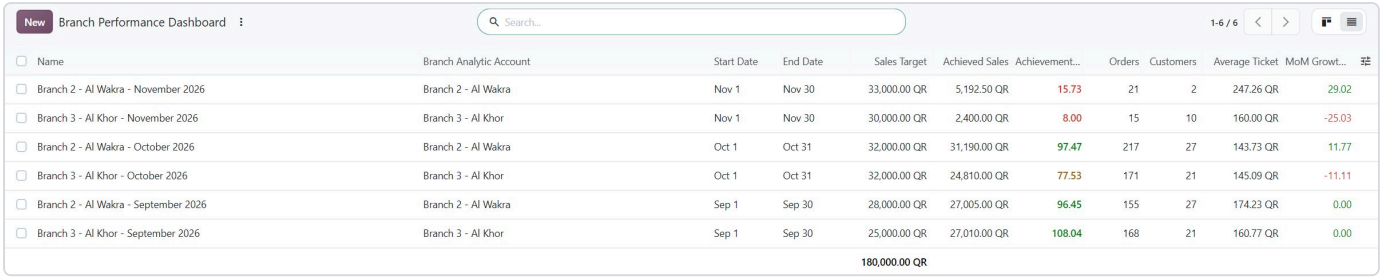

Analytic Items created when the closing entries were posted, in the Branches column.

3.5 Branch Performance Dashboard

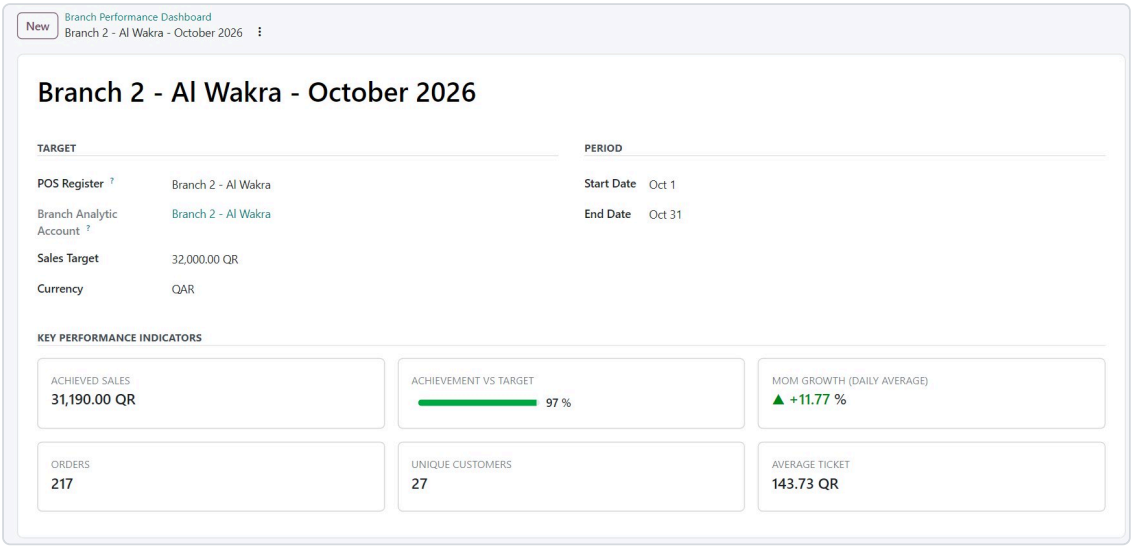

Point of Sale > Reporting > Branch Performance Dashboard: one card per target with target vs actual sales, progress bar (green ≥ 90 %, orange 70–89 %, red < 70 %), orders, customers, average ticket and the MoM arrow. November is in progress (4 days of sales against a monthly target). September shows +0.00 % because there are no August sales.

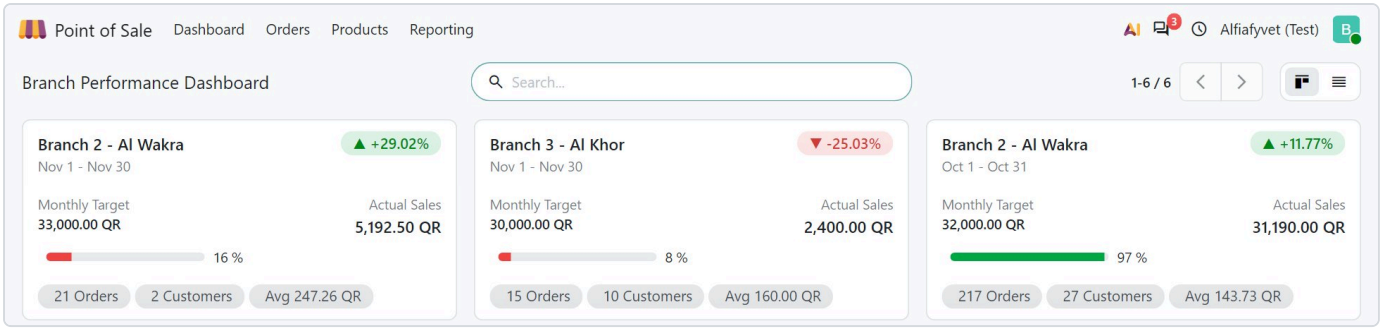

Name	Branch Analytic Account	Start Date	End Date	Sales Target	Achieved Sales	Achievement...	Orders	Customers	Average Ticket	MoM Growt...
Branch 2 - Al Wakra - November 2026	Branch 2 - Al Wakra	Nov 1	Nov 30	33,000.00 QR	5,192.50 QR	15.73	21	2	247.26 QR	29.02
Branch 3 - Al Khor - November 2026	Branch 3 - Al Khor	Nov 1	Nov 30	30,000.00 QR	2,400.00 QR	8.00	15	10	160.00 QR	-25.03
Branch 2 - Al Wakra - October 2026	Branch 2 - Al Wakra	Oct 1	Oct 31	32,000.00 QR	31,190.00 QR	97.47	217	27	143.73 QR	11.77
Branch 3 - Al Khor - October 2026	Branch 3 - Al Khor	Oct 1	Oct 31	32,000.00 QR	24,810.00 QR	77.53	171	21	145.09 QR	-11.11
Branch 2 - Al Wakra - September 2026	Branch 2 - Al Wakra	Sep 1	Sep 30	28,000.00 QR	27,005.00 QR	96.45	155	27	174.23 QR	0.00
Branch 3 - Al Khor - September 2026	Branch 3 - Al Khor	Sep 1	Sep 30	25,000.00 QR	27,010.00 QR	108.04	168	21	160.77 QR	0.00
				180,000.00 QR						

List view: achievement in green (97.47, 96.45, 108.04), orange (77.53) or red (15.73, 8.00); MoM growth green when positive, red when negative.

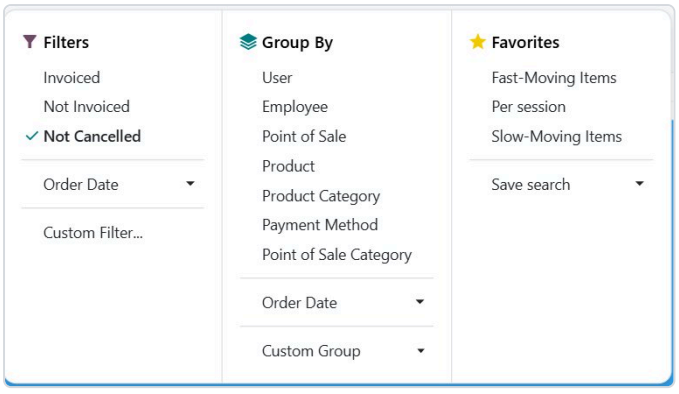

Target form (Branch 2 - Al Wakra - October 2026): inputs on top (register, analytic account from the register, target, period), KPI cards below.

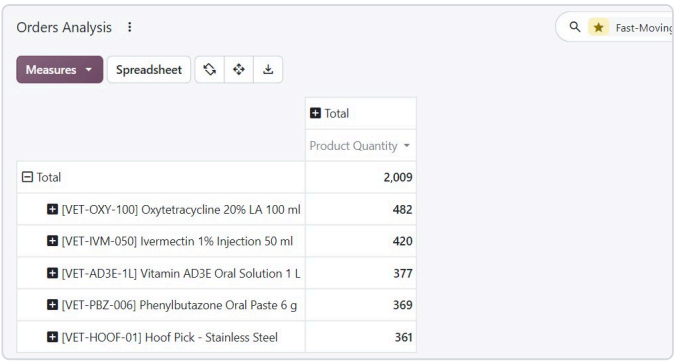

Logged in as a POS user (pharmacist): the dashboard is visible but read only (no New button, no Configuration menu).

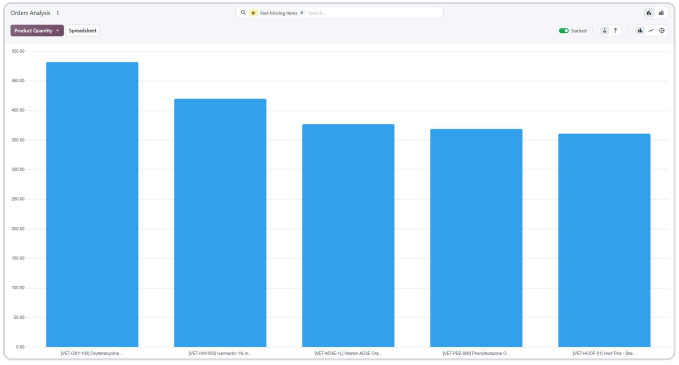

3.6 Fast-moving and slow-moving items

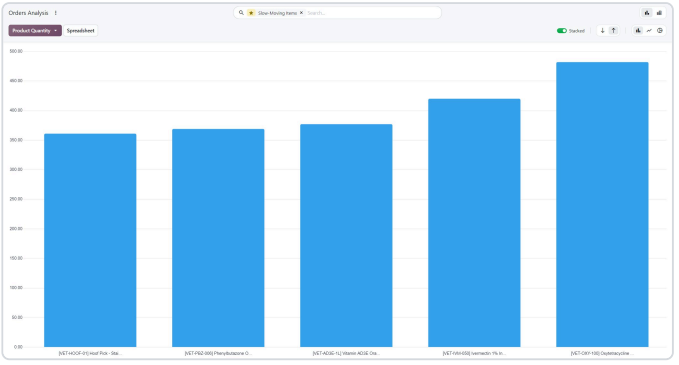

Point of Sale > Reporting > Orders > Favorites: the two shared favorites added by the module.

Pivot with Fast-Moving Items: Product Quantity per product, sorted by clicking the measure header.

Fast-Moving Items: quantity sold per product, highest first (Oxytetracycline 482 … Hoof Pick 361).

Slow-Moving Items: same figures, lowest first.

Procedure for branch managers (also in the module README):

1. Point of Sale > Reporting > Orders.
2. Favorites > **Fast-Moving Items** (best sellers first) or **Slow-Moving Items** (lowest quantities first).
3. Choose the period with the Order Date filter and the branch by typing the register name and choosing “Search Point of Sale”.
4. For figures, switch to the pivot view and click the **Product Quantity** header to sort (once ascending, twice descending).

4. Tests

Implementation plan tests

Plan	What is checked	Automated test	On screen	Result
7.1	Register with Branch 1 - Al Rayyan; session with orders closed; the revenue lines of the entry have Branch 1's analytic account (100 %); analytic items created	test_01	Sections 3.3–3.4	**Pass**
7.2	Target 100,000 QAR for October; 100 orders, 80 customers, 50,000 QAR → achieved 50,000, 50 %, 100 orders, 80 customers, ticket 500	test_03	Section 3.5	**Pass**
7.3	Past and current month orders → MoM growth negative (−50 %) and positive (+100 %)	test_04	Section 3.5	**Pass**

Automated tests of the module (5)

Test (TestBranchKpi)	What it checks	Result
`test_00_branch_analytic_accounts`	Plan Branches with the 8 analytic accounts	**Pass**
`test_01_session_closing_entry_tagged_with_branch`	Plan 7.1: revenue lines tagged with Branch 1 - Al Rayyan, other lines not; analytic items 1,150.00 in the Branches column	**Pass**
`test_02_session_closing_without_branch_is_not_tagged`	A register without a branch account: closing entry without analytic distribution	**Pass**
`test_03_target_kpis`	Plan 7.2: 100 orders of 500.00, 80 customers, October target of 100,000 → all KPIs; target name "<register> - October 2025"; November target empty	**Pass**
`test_04_mom_growth_rate`	Plan 7.3: July 100 / day, August 50 / day (−50 %), September 100 / day (+100 %); no previous sales → 0	**Pass**

Run: `-u alfiafy_account_reports --test-enable --test-tags /alfiafy_account_reports` → **0 failed, 0 error(s) of 5 tests**.

Full regression on the 9 project modules (alfiafy_product_base, alfiafy_purchase, alfiafy_sale, alfiafy_pos, pos_multi_uom_price, alfiafy_partner_sourcing, restricted_cost_access, sale_and_purchase_approvals_steps, alfiafy_account_reports) → **0 failed of 53 tests**.

Checks on the screens (11)

#	Check	Result
1	Branches plan with the 8 analytic accounts	**Pass**
2	POS settings show Branch Analytic Account per register (Al Wakra, Al Khor set)	**Pass**
3	Closing entry POSC/2026/00001: revenue line Branch 2 - Al Wakra 100 %, payment lines untagged; refunds entry RPOSC/2026/00001 tagged too	**Pass**
4	Closing entry POSC/2026/00002: revenue line Branch 3 - Al Khor	**Pass**
5	Analytic items: Al Wakra 63,862.50 and −600.00, Al Khor 54,220.00	**Pass**
6	Profit and Loss with analytic columns: Al Wakra 63,262.50, Al Khor 54,220.00	**Pass**
7	Dashboard: 6 targets, progress bar colours, badges, MoM arrows; figures equal to the orders loaded (e.g. Al Wakra October 31,190.00 / 217 orders)	**Pass**
8	List colours: ≥ 90 % green, 70–89 % orange, < 70 % red	**Pass**
9	MoM checked by hand: Al Wakra Oct +11.77 %, Al Khor Oct −11.11 %, Nov (4 days) +29.02 % / −25.03 %	**Pass**
10	Fast-Moving / Slow-Moving favorites: graph sorted descending / ascending; pivot by product	**Pass**
11	Access: POS users (pharmacist, buyer) read only, creating a target refused; accounting manager (accountant) creates, edits and deletes	**Pass**

5. Points to confirm and open items

Where Odoo 20 differs from the plan

- **Session closing hook (2.3)**: `_create_account_move()` and `action_pos_session_closing_control()` no longer exist in Odoo 20. The closing entry is created by `pos.session._create_session_account_move()` (once for sales, once for refunds), which is where the module hooks in. The revenue lines are prepared by `pos.order._prepare_account_move_line_data()`; the module adds the branch distribution there, only during a session closing, so it is set before the entry is posted.
- **Order status**: Odoo 20 POS orders have no "invoiced" status (draft, cancelled, paid, posted). The KPIs use Paid and Posted, which includes invoiced orders.
- **Progress bar**: the `oe_kanban_progressbar` class no longer exists; the kanban uses the Odoo 20 progress bar widget on Achievement %, coloured with the same thresholds.
- **List badges**: Odoo 20 has no badge widget for numbers, so the achievement % is shown in bold green / orange / red text (text-success / text-warning / text-danger, as in the plan).
- **Pivot sorting**: Odoo does not save pivot sorting in a favorite. The favorites sort the graph (the first view of Orders); in the pivot the manager clicks the Product Quantity header.
- **Access file**: `security/ir.access.csv` (Odoo 20 format) instead of `ir.model.access.csv`.
- **Branch P&L**: in Odoo 20 the P&L "Analytic" button adds columns per analytic account or plan. It needs Accounting > Settings > **Analytic Accounting**, which was enabled on the test database (a setting, no code).

Small additions

- Target name "<register> - October 2026" (the plan's example shows only the town; the module uses the register name). A period that is not a whole month is shown as a date range.
- New targets default to the current month; the end date cannot be before the start date; the currency comes from the register.
- Search view with filters and grouping by register and period.
- Analytic accounts have no company, so the Oman company can use "Oman Branch Operations".
- KPI figures are read with elevated rights (totals only), so an accounting manager without POS rights still sees them.

To confirm

- **Scope of the branch P&L**: BRD 1.6 #1 asks for sales, cost of goods sold and expenses per branch. As in the plan, only the POS session revenue is tagged. Not tagged: customer invoices (wholesale, Oman, invoiced POS orders), vendor bills and expenses, stock valuation / cost of goods sold entries. In the test database 4,100.00 of 2026 revenue (customer invoices) has no branch. These can be tagged by hand, with standard analytic distribution models, or in a follow-up. Please confirm.
- **Orders and average ticket**: refund orders count as orders (the plan says "completed POS orders"). Should refunds be left out of the order count and the average ticket?
- **MoM definition**: average per day of the period (days elapsed so far) vs the whole previous month. Should it compare against the same days of the previous month instead?
- **Register names**: the test registers follow the plan numbering (Branch 2 - Al Wakra, Branch 3 - Al Khor). The real list of branches and registers is to be confirmed.

Test data added

- Analytic Accounting enabled; registers renamed and linked to Branch 2 - Al Wakra / Branch 3 - Al Khor.
- 726 POS orders (September–November 2026) and 42 test customers ("Al Wakra / Al Khor Livestock Customer nn"); branch stock topped up by inventory adjustment for these sales.
- Both POS sessions closed: POSC/2026/00001, RPOSC/2026/00001, POSC/2026/00002. Opening the POS creates a new session.
- 6 targets (September, October, November 2026 for each register).
- Nothing was committed or pushed to the `testalfiafyvet` repository.

How to run

Start the test server:

```
.venv20\Scripts\python.exe odoo\odoo-bin -c odoo\odoo.conf --addons-path=enterprise-20.0,odoo\addons,testalfiafyvet -d alfiafy20_test -p 8021
```

Logins: `admin / admin` (POS manager and accounting manager); `accountant / Test@1234`; `pharmacist / Test@1234` (POS user, read only). Dashboard: Point of Sale > Reporting > Branch Performance Dashboard. Branch P&L: Accounting > Reporting > Profit and Loss > Analytic.

Re-run the tests:

```
... -d alfiafy20_test -u alfiafy_account_reports --test-enable --test-tags /alfiafy_account_reports --stop-after-init
```

Install on another database: add `testalfiafyvet` to the addons path, install `alfiafy_account_reports`, enable Analytic Accounting, and set the Branch Analytic Account on each register.
