Alfiafyvet – Odoo 20

DES00141 **alfiafy_documents**: Regulatory Compliance & License Expiry Alerts
DES00142 **zkteco_adms_attendance**: ZKTeco biometric attendance, upgraded to Odoo 20

Build and test report · 4 November 2026 · AGM Global Services
Repository folder: `testalfiafyvet` · Test database: `alfiafy20_test`

2
modules: 1 new (DES00141), 1 upgraded 19 → 20 (DES00142)

5 / 5
DES00141 tests passed (plan tests 4.1–4.3 + 2)

31 / 31
DES00142 tests passed (28 existing + 3 new)

89 / 89
tests of all 11 project modules, 0 failed

DES00141: license expiry alerts

DES00142: ZKTeco ADMS push (now on Odoo 20)

Dashed boxes are standard Odoo.

What was done

- **DES00142**: upgraded `zkteco_adms_attendance` from Odoo 19 to Odoo 20: access file, Odoo 20 web routes, attendance work entry type, calendar time zones, time rules (section 3). Tested with a simulated SpeedFace device talking to the test server.
- **DES00141**: built `alfiafy_documents` from the implementation plan: license fields and expiry status on Documents, nightly alerts (activity + e-mail) to the compliance managers, settings, Regulatory Licenses screens and Documents filters.
- Ran the plan tests as automated tests, the full regression of the 11 project modules, and the screens on the test database (this report).

1. DES00141 alfiafy_documents: module and plan coverage

Module	Ref.	Status	Version	Depends on
alfiafy_documents Alfiafy Regulatory Compliance & License Expiry Alerts	DES00141	New	20.0.1.0.0	documents, hr, stock, mail, alfiafy_product_base (as in the plan)

Plan task	Delivered
1.1–1.3 Module, manifest	Category Productivity/Documents, version 20.0.1.0.0. Data: views, e-mail template, scheduled action, settings view.
2.1 License fields	On documents: **Regulatory License** (flag), **License Type** (Pharmacy License, Doctor / Practitioner License, Commercial Registration (CR), Vehicle Permit, Other), License Number, Issuing Authority, Branch (warehouse), Doctor / Employee, Issue Date, Expiry Date (indexed), Alert Days Before Expiry (default 60). **Days to Expiry** (negative once expired) and **Expiry Status** (Valid / Expiring Soon / Expired, stored and indexed).
2.2 Settings	**Compliance Alert Recipients** (users), kept per company.
2.3 Nightly method	`_cron_check_document_expiry()` : license documents with an expiry date and days to expiry ≤ alert days get, unless an expiry reminder is still open, one To-Do activity per compliance manager and the alert e-mail to the managers.
3.1 Form	License form with the Regulatory License checkbox, the status badge (green / orange / red) and the page **License & Regulatory Details**, shown only for licenses (section 6: Odoo 20 Documents has no document form to inherit).
3.2 Kanban and filters	Documents app: filters Regulatory Licenses, Expiring Soon, Expired; group by Expiry Status; status badge on license cards. Documents > **Regulatory Licenses**: kanban by expiry status, list, form.
3.3 E-mail template	**[URGENT] License Expiry Alert: <name> (<days> Days Left)** with license number, type, branch / doctor, authority, expiry date, days remaining and a link to the license in Odoo.
3.4 Scheduled action	“Documents: License Expiry Alerts”, every day.
3.5 Settings view	Documents > Configuration > Settings > **Regulatory Compliance**.
4.1–4.3 Tests	Automated, plus two more (section 5).

> **Status rule.** Days to expiry = expiry date − today. Below 0: **Expired**; from 0 up to the alert days: **Expiring Soon**; above: **Valid**. Example: expiry in 25 days with 30 alert days is Expiring Soon; with 60 alert days, a license expiring in 61 days is Valid today and becomes Expiring Soon two days later (the nightly action refreshes the stored status).

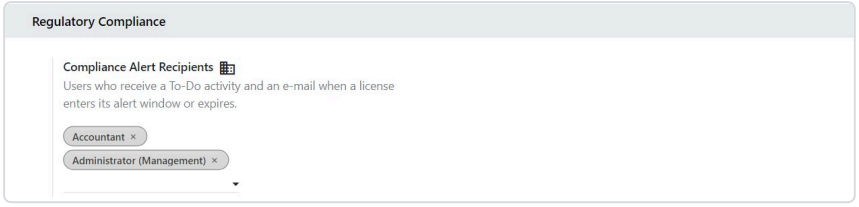

2. DES00141 on the screens

On `alfiafy20_test` (4 November 2026): Administrator and Accountant set as compliance alert recipients; five licenses with sample PDF files in the folder Legal / **Licenses & Permits**; then the scheduled action was run twice.

License	Type	Branch / doctor	Expiry	Alert days	Status	Nightly action
Pharmacy License - Al Wakra	Pharmacy License	Pharmacy Branch 1 - Al Wakra	19/12/2026 (45 days)	60	Expiring Soon	Alerted
Pharmacy License - Al Khor	Pharmacy License	Pharmacy Branch 2 - Al Khor	31/08/2027 (300 days)	60	Valid	–
Veterinarian License - Dr. Khalid	Doctor / Practitioner	Dr. Khalid - Branch Manager	25/10/2026 (−10 days)	60	Expired	Alerted
Commercial Registration - Alfiafyvet	CR	Main Warehouse (Doha)	29/11/2026 (25 days)	30	Expiring Soon	Alerted
Vehicle Permit - Delivery Van 1	Vehicle Permit	Main Warehouse (Doha)	04/03/2027 (120 days)	60	Valid	–

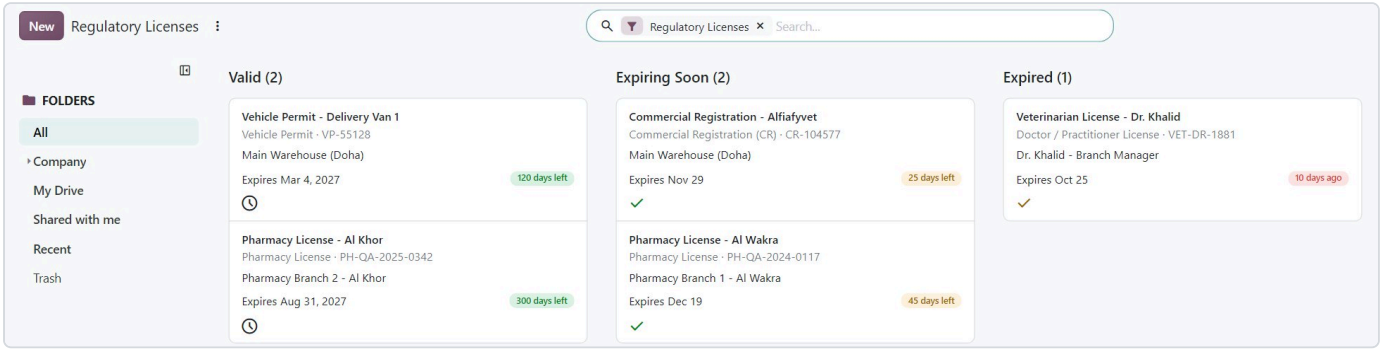

First run: 6 To-Do activities (3 licenses × 2 managers) and 3 alert e-mails. Second run: nothing new, because the reminders are still open.

2.1 Settings

Documents > Configuration > Settings: new block **Regulatory Compliance** with the alert recipients (per company).

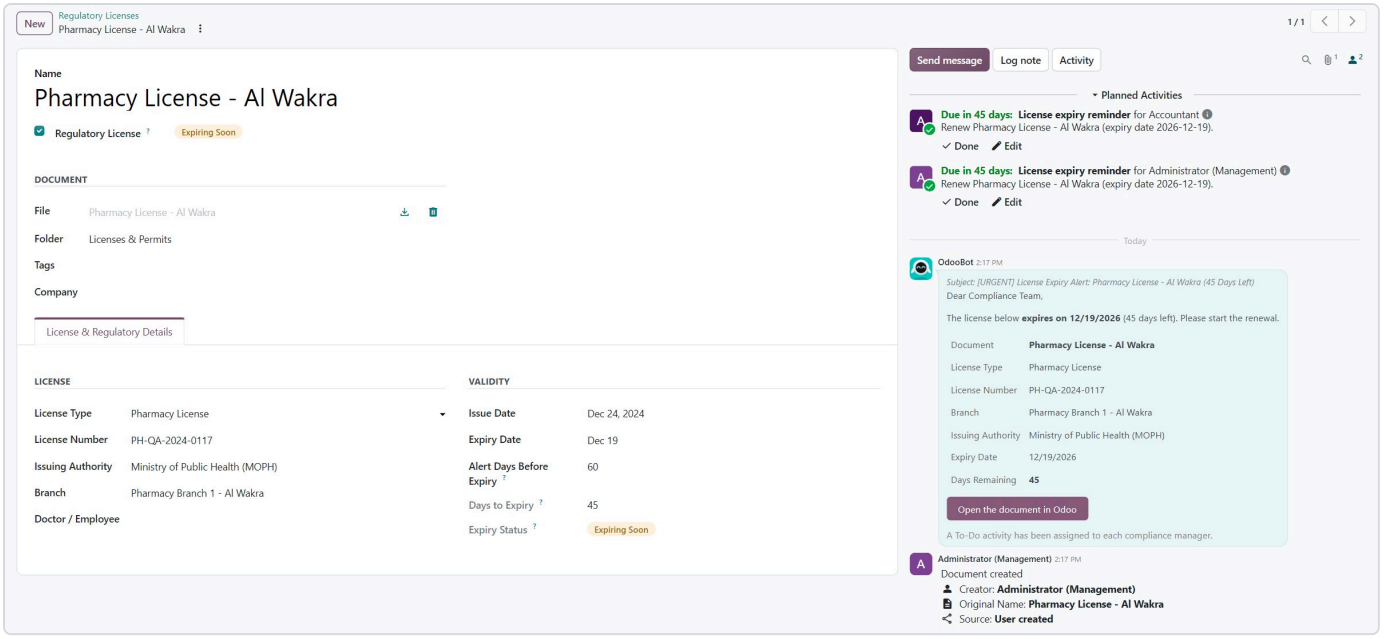

2.2 Regulatory Licenses

Documents > Regulatory Licenses: kanban by expiry status with days left / days ago. The check mark is the open expiry reminder (activity).

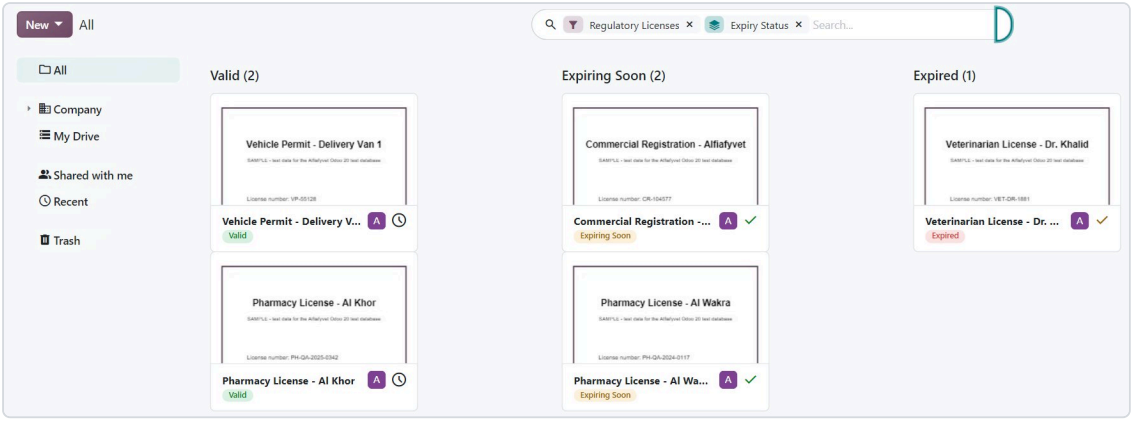

List: license type, number, branch, doctor, expiry date, days to expiry, status badge (green / orange / red) and the open reminder.

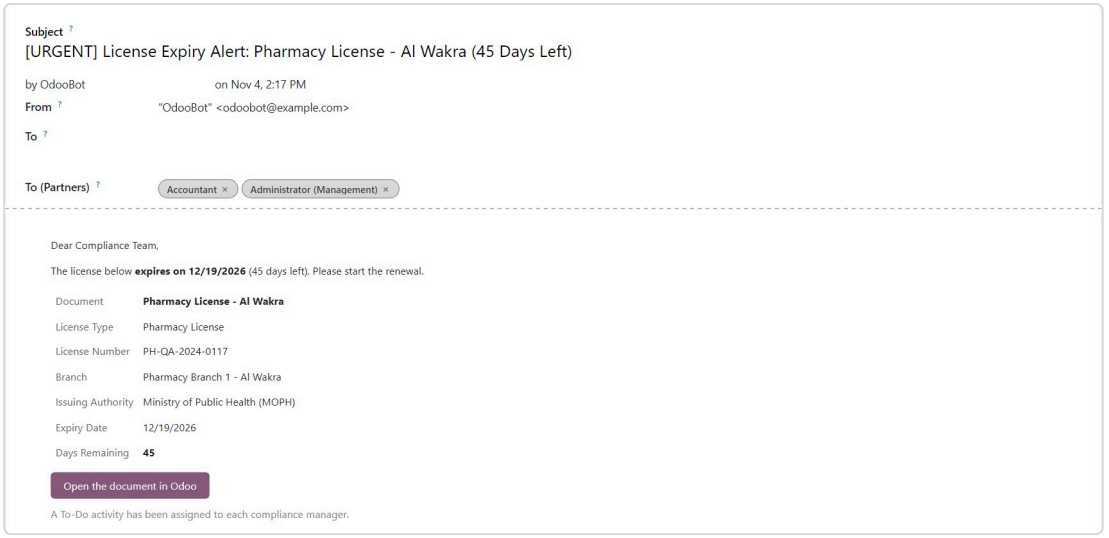

License form (Pharmacy License - Al Wakra): Regulatory License checkbox and **Expiring Soon** badge, file and folder, page **License & Regulatory Details**. Chatter: the two To-Do reminders (Accountant, Administrator), due on the expiry date, and the alert e-mail.

2.3 In the Documents app

Documents app, filter **Regulatory Licenses** and group by **Expiry Status** (new). License cards show their status badge. The filters Expiring Soon and Expired are in the same menu.

2.4 Alert e-mail

Alert e-mail queued by the scheduled action to the compliance managers (Settings > Technical > Emails). The button opens the license form. Sender: the company e-mail; the test company has none, so OdooBot is used (section 6).

3. DES00142 zkteco_adms_attendance: upgrade to Odoo 20

Module	Ref.	Status	Version	Depends on
zkteco_adms_attendance ZKTeco ADMS Attendance (Push)	DES00142	Ported 19 → 20	19.0.1.3.1 → 20.0.1.3.1	hr_attendance, resource, mail (unchanged)

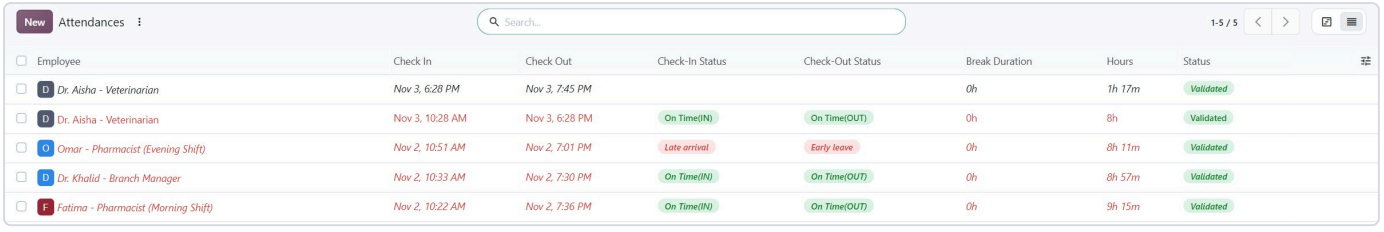

The Odoo 19 version is kept unchanged as a backup in the session folder. The functions are the same; these changes were needed for Odoo 20:

Area	Odoo 20 change	What was changed in the module
Access rights	ir.model.access.csv and record rules (ir.rule) are replaced by `ir.access.csv`.	Access rights and the 5 multi-company rules moved to `security/ir.access.csv` (rules as company domains without group). Groups unchanged.
Device web routes	Routes without login (`auth='none'`) are read-only by default. A device handshake or upload then failed once and was retried, logging an error each time.	The routes that store data (`/iclock/cdata`, `getrequest`, `devicecmd`) are declared read / write.
Attendances	An attendance must have a **work entry type**, taken from the company. A device push has no user, hence no company: the attendance failed and every punch went to Error.	Device requests run as the superuser, and each employee's punches are processed in the employee's company. New HTTP test reproduces a real push.
Work schedule mode	Working schedules no longer have a time zone; work intervals are computed per time zone.	"Work Schedule (Calendar)" policy updated to the new call; new test for that mode. Two tests that created schedules with a time zone were adapted.
Time rules	New Odoo 20 time rules can split a long attendance into a work part and an overtime part; the punch out then no longer matched the attendance end.	The punch status of a check-out also looks at the overtime part, so its rating (On Time / Early leave) stays visible. New test.
Version	Module version prefix.	`20.0.1.3.1`.

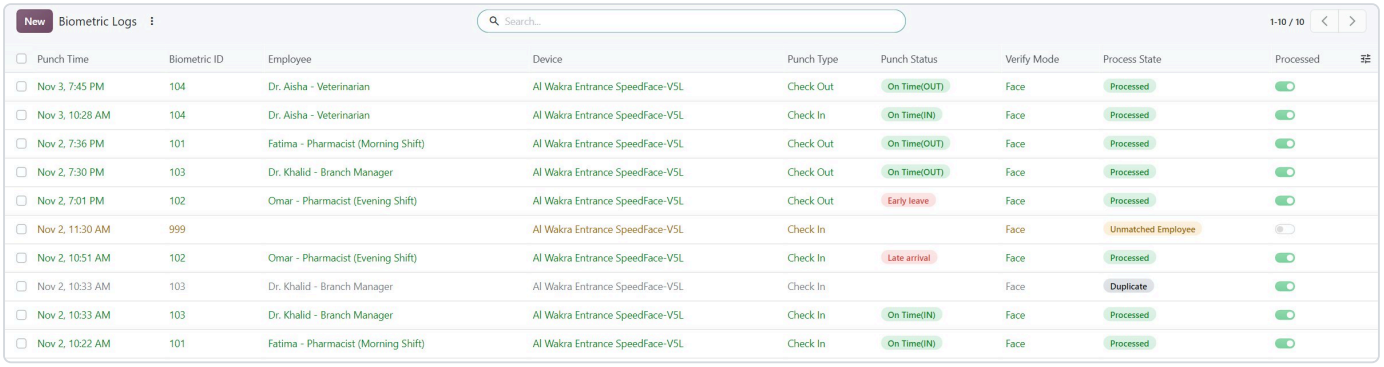

4. DES00142 on the screens (simulated device)

A script played the SpeedFace-V5L side of the ADMS protocol against the test server (port 8021), with device time zone Asia/Qatar. Employees got biometric IDs 101 Fatima, 102 Omar, 103 Dr. Khalid, 104 Dr. Aisha; policy **Pharmacy Shift 08:00-17:00** (fixed working time, 5 min tolerance) set as company default.

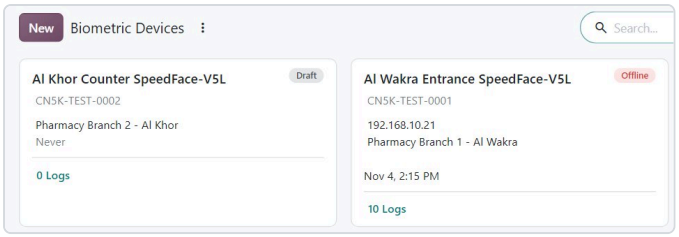

Device request	Answer from Odoo	Result
`GET /iclock/cdata?SN=…` (device still Draft)	HTTP 401 ACCESS DENIED	**Pass**
`GET /iclock/cdata?SN=…&options=all` after Confirm	Handshake options, `TimeZone=180`; device Online	**Pass**
`POST /iclock/cdata?table=ATTLOG` (10 punches)	`OK: 10`; same upload again: `OK: 0` (offline replay ignored)	**Pass**
Punches processed	8 processed, 1 duplicate (double read of Dr. Khalid within 60 s), 1 unmatched (ID 999)	**Pass**
`GET /iclock/getrequest` after Push Settings	`C:1:INFO`, `C:2:SET OPTION …`	**Pass**
`POST /iclock/devicecmd` (Return=0)	Both commands Done; next poll answers `OK`	**Pass**
`POST /iclock/cdata?table=OPTIONS`	Firmware Ver 8.0.4.6, 4 users, 6 fingerprints, 4 faces stored	**Pass**
`GET /iclock/cdata?SN=UNKNOWN-SN` / `/iclock/ping`	401 ACCESS DENIED / OK	**Pass**

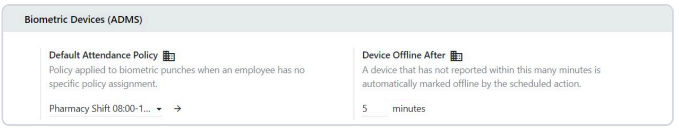

Attendances: Fatima 07:52–17:06 On Time / On Time, Omar 08:21–16:31 **Late arrival / Early leave**, Dr. Khalid On Time (double read ignored). Dr. Aisha 07:58–17:15 was split by the Odoo 20 time rules into 8 h of work and 1 h 17 of overtime. Times are shown in the administrator's time zone (Asia/Kolkata, +2:30 on Qatar time).

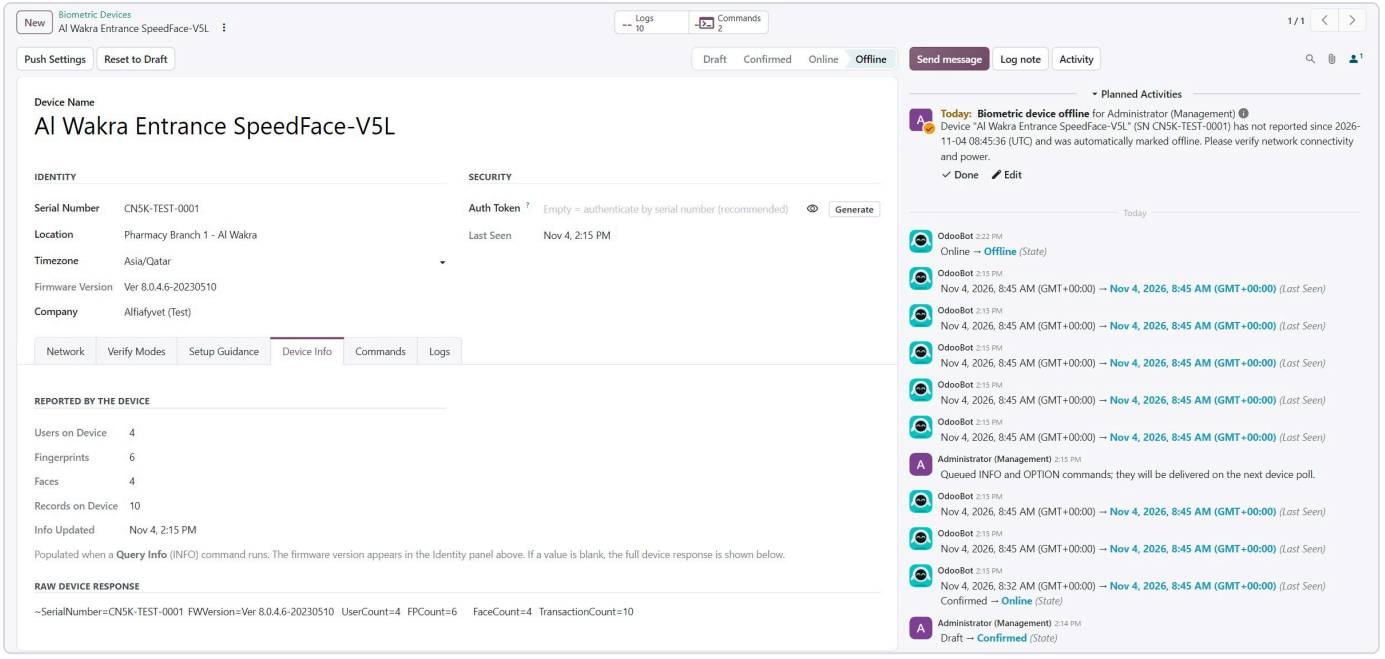

Attendances > Configuration > Biometric > Biometric Logs: raw punches with punch type, punch status, verify mode (Face) and processing state: Processed, Duplicate, Unmatched Employee.

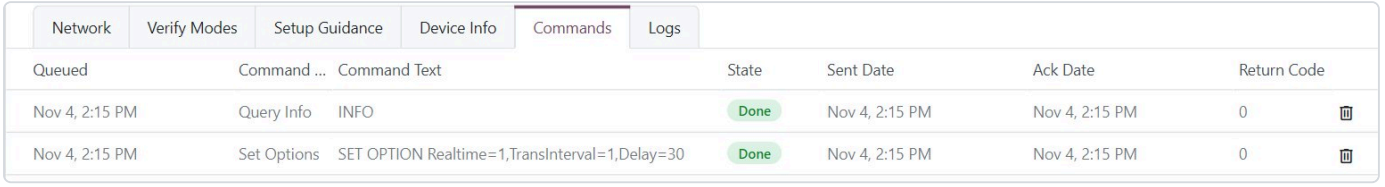

Biometric Devices: the Al Wakra device (contacted, then Offline after 5 minutes without contact) and a second one still in Draft.

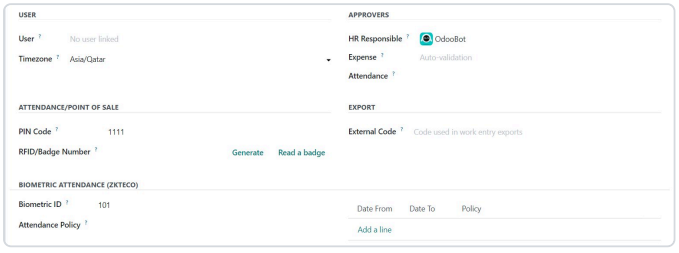

Attendances settings: default attendance policy and offline delay.

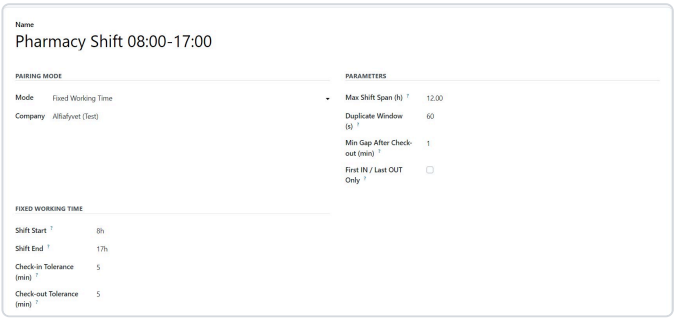

Device form: identity, firmware reported by the device, empty auth token (authentication by serial number), Device Info tab. The scheduled action marked the device Offline and created a To-Do for the administrator.

Commands tab: INFO and SET OPTION queued by Push Settings, sent and acknowledged with return code 0.

Employee > Settings: time zone Asia/Qatar, block **Biometric Attendance (ZKTeco)** with Biometric ID 101, policy and dated policy lines.

Attendance policy "Pharmacy Shift 08:00-17:00": fixed working time, tolerances, duplicate window.

5. Tests

DES00141 implementation plan tests

Plan	What is checked	Automated test	On screen	Result
4.1	Expiry in 25 days, alert 30 days before → 25 days to expiry, Expiring Soon	test_01	Section 2.2 (CR)	**Pass**
4.2	Expiry date in the past → Expired	test_02	Section 2.2 (Dr. Khalid)	**Pass**
4.3	Nightly action: activity for the compliance manager; run again → no duplicate	test_03	Sections 2.2–2.4	**Pass**

Test (TestLicenseExpiry)	What it checks	Result
`test_01_expiring_soon`	Plan 4.1	**Pass**
`test_02_expired_and_valid`	Plan 4.2; a license outside its window is Valid; a document that is not a license has no status	**Pass**
`test_03_cron_activity_mail_and_no_duplicate`	Plan 4.3: one activity for the manager, due on the expiry date; one alert e-mail with the plan subject to the manager; no duplicate on a second run; reminded again once the activity is done	**Pass**
`test_04_cron_refreshes_stored_status`	Two days later the nightly run turns Valid into Expiring Soon (and alerts); after the expiry date, Expired	**Pass**
`test_05_no_recipients_no_alert`	No compliance recipients: no activity	**Pass**

Run: `-i alfiafy_documents --test-enable --test-tags /alfiafy_documents` → **0 failed, 0 error(s) of 5 tests**.

DES00142 tests

The module's 28 existing tests (ATTLOG parsing, ingestion and de-duplication, employee matching, the five policy modes, fixed-time ratings, first-in / last-out, offline cron, unregistered device) all pass on Odoo 20 after the changes of section 3 (two adapted for working schedules without time zone). New tests:

Test	What it checks	Result
`test_calendar_policy_uses_work_schedule`	Work Schedule (Calendar) mode with the Odoo 20 per-time-zone work intervals	**Pass**
`test_punch_status_after_time_rule_split`	Check-out rating kept after an Odoo 20 time rule split	**Pass**
`test_attlog_push_creates_attendance`	Real HTTP push (handshake + ATTLOG) creates the attendance with its work entry type	**Pass**

Run: `-u zkteco_adms_attendance --test-enable --test-tags /zkteco_adms_attendance` → **0 failed, 0 error(s) of 31 tests**.

All project modules

alfiafy_product_base, alfiafy_purchase, alfiafy_sale, alfiafy_pos, pos_multi_uom_price, alfiafy_partner_sourcing, restricted_cost_access, sale_and_purchase_approvals_steps, alfiafy_account_reports, alfiafy_documents, zkteco_adms_attendance → **0 failed, 0 error(s) of 89 tests**.

Checks on the screens

#	DES00141	Result
1	Settings: Regulatory Compliance block, recipients Accountant + Administrator	**Pass**
2	Five licenses: 45 days Expiring Soon, 300 Valid, −10 Expired, 25 (alert 30) Expiring Soon, 120 Valid	**Pass**
3	Regulatory Licenses kanban by status (2 / 2 / 1), list with badges, license form with details page	**Pass**
4	Documents app: filter Regulatory Licenses, group by Expiry Status, badges on cards	**Pass**
5	Nightly action: 6 activities (3 licenses × 2 managers), due on the expiry date (today for the expired one)	**Pass**
6	3 alert e-mails with the plan subject, recipients, license details and link	**Pass**
7	Second run: no new activity or e-mail	**Pass**

#	DES00142	Result
1	Device requests of section 4 (8 rows: rejection, handshake, upload, replay, commands, device info, unknown device, ping)	**Pass**
2	Attendances with check-in / check-out ratings (On Time, Late arrival, Early leave), double read ignored, unmatched ID kept for HR	**Pass**
3	Device kanban and form, commands, device info, stale device set Offline with a To-Do	**Pass**
4	Employee biometric block, policy form, Attendances settings block render on Odoo 20	**Pass**
5	No read-only retry or error in the server log for device requests	**Pass**

6. Points to confirm and open items

DES00141: where the build differs from or adds to the plan

- **No document form in Odoo 20 Documents**: the app shows a preview and a details panel, there is no form view to inherit (3.1). The module adds its own license form and the menu Documents > **Regulatory Licenses** (kanban by status, list, form). The alert e-mail opens that form.
- **Recipients per company**: settings are not stored by themselves, so the compliance recipients are kept on the company.
- **Stored status**: the status depends on today's date; the nightly action refreshes it before alerting (otherwise it would only change when the license is edited).
- **Reminders**: one To-Do per manager, due on the expiry date (today when already expired), and one e-mail per license to all managers. Nothing is repeated while a reminder is open; once it is marked done, the next night reminds again if the license is still inside its window or expired. Please confirm this is the wanted rhythm.
- **No recipients**: no alert is created (a warning is logged).

DES00141: to set up

- **Outgoing e-mail**: the e-mails are queued; an outgoing mail server and a company e-mail (sender) are needed. In the test database they are sent as OdooBot.
- **Documents app**: installing it also installed its standard bridges (documents_account, documents_hr, documents_hr_expense, documents_hr_skills, documents_product, documents_spreadsheet, attachment_indexation). The server lacks the Python package `pdfminer.six` for searching text inside PDFs (warning only).

DES00142: to confirm

- **Time rules and work entry types (Odoo 20)**: attendances now get a work entry type and long days are split into work and overtime by the time rules in Attendances > Configuration. In the test database the 2 November attendances are typed as overtime because the test employees' records start on 3 November 2026 (no working schedule before). HR should review the time rules.
- **Chatter volume** (existing since Odoo 19): "Last Seen" is tracked, so each device contact (every 30 s heartbeat) logs a message on the device. Removing the tracking on that field is recommended.
- **docs/zkteco_faq_and_server_checks.md** (not changed) still describes an Odoo 19 Odoo.sh instance of another project; please review before handing it to the customer.

Test data added

- Installed `documents` (and bridges), `alfiafy_documents`, `zkteco_adms_attendance`.
- DES00141: recipients Administrator + Accountant; folder Legal / Licenses & Permits with 5 sample licenses; 6 activities and 3 queued e-mails.
- DES00142: devices CN5K-TEST-0001 (Al Wakra) and CN5K-TEST-0002 (Al Khor, Draft); policy Pharmacy Shift 08:00-17:00 as company default; biometric IDs 101–104 and time zone Asia/Qatar on Fatima, Omar, Dr. Khalid, Dr. Aisha; 10 punches, 5 attendances, 2 commands.
- Nothing was committed or pushed to the `testalfiafyvet` repository.

How to run

`.venv20\Scripts\python.exe odoo\odoo-bin -c odoo\odoo.conf --addons-path=enterprise-20.0,odoo\addons,testalfiafyvet -d alfiafy20_test -p 8021`

Login `admin / admin`. Licenses: Documents > Regulatory Licenses. Devices: Attendances > Biometric Devices; a device on the network points its ADMS server to this Odoo (port 8069, or 443 with HTTPS).

Tests: `... -u alfiafy_documents,zkteco_adms_attendance --test-enable --test-tags /alfiafy_documents,/zkteco_adms_attendance --stop-after-init`
